Numbers: Rational and Irrational Ivan Niven, 1961 Self study guide on the classification of numbers and the standards used to determine whether a number is rational or irrational Numbers: rational and irrational Ivan Morton Niven, 2003-01

Irrational Numbers Ivan Niven, 1985-12-31 In this monograph Ivan Niven provides a masterful exposition of some central results on irrational transcendental and normal numbers He gives a complete treatment by elementary methods of the irrationality of the exponential logarithmic and trigonometric functions with rational arguments The approximation of irrational numbers by rationals up to such results as the best possible approximation of Hurwitz is also given with elementary techniques The last third of the monograph treats normal and transcendental numbers including the transcendence of p and its generalization in the Lindemann theorem and the Gelfond Schneider theorem Most of the material in the first two thirds of the book presupposes only calculus and beginning number theory The book is almost wholly self contained The results needed from analysis and algebra are central and well known theorems and complete references to standard works are given to help the beginner The chapters are for the most part independent There is a set of notes at the end of each chapter citing the main sources used by the author and suggesting further reading **The Number System of Arithmetic and Algebra**

Comprehensive Mathematics IX , **Another Sort of Mathematics** Jake Tawney, 2025-07-29 Years ago James V Schall wrote Another Sort of Learning a book listing those things you should read but probably were never required to read It is not a curriculum except maybe one for life This book you have in your hands is something of a mathematical tribute to

Schall's basic idea and is aptly titled *Another Sort of Mathematics*. Like Schall's book it is not a curriculum. It is however a list of some things from mathematics you should experience but probably were never required to experience. The theorems and proofs in this book represent in a small way some of the best that has been said within the discipline of mathematics. There is something unique in the human soul that can only be satisfied by wondering about mathematics. And that means regardless of your background this book is for you. Reclaim your mathematical inheritance. Embrace the mathematician within you. Choose to wonder.

This hands on resource will show you how to use what we know about educational neuroscience to transform your classroom into a place where success is accessible for all.

Surprises and Counterexamples in Real Function Theory A. R. Rajwade, A.K Bhandari, 2007-01-15 This book presents a variety of intriguing, surprising and appealing topics and nonroutine theorems in real function theory. It is a reference book to which one can turn for finding that arise while studying or teaching analysis. Chapter 1 is an introduction to algebraic irrational and transcendental numbers and contains the Cantor ternary set. Chapter 2 contains functions with extraordinary properties: functions that are continuous at each point but differentiable at no point. Chapters 4 and 5 discuss intermediate value property, periodic functions, Rolle's theorem, Taylor's theorem, points of tangents. Chapter 6 discusses sequences and series. It includes the restricted harmonic series of alternating harmonic series and some number theoretic aspects. In Chapter 7 the infinite peculiar range of convergence is studied. Appendix I deals with some specialized topics. Exercises at the end of chapters and their solutions are provided in Appendix II. This book will be useful for students and teachers alike.
