Toward Other Worlds Michael R. Collings, 2010-05-01 This collection of 25 essays of literary criticism includes pieces on British poet John Milton British fantasy writer C S Lewis American horror writer Stephen King American SF and fantasy writer Orson Scott Card British horror writer Clive Barker and several others Complete with bibliography and index **The Search for Life on Other Planets** Bruce Jakosky, 1998-10-15 Does life exist on other planets This 1998 book presents the scientific basis for thinking there may be life elsewhere in the Universe It is the first to cover the entire breadth of recent exciting discoveries including the discovery of planets around other stars and the possibility of fossil life in meteorites from Mars Suitable for the general reader this authoritative book avoids technical jargon and is well illustrated throughout It covers all the major topics including the origin and early history of life on Earth the environmental conditions necessary for life to exist the possibility that life might exist elsewhere in our Solar System the occurrence of planets around other stars and their habitability and the possibility of intelligent extraterrestrial life For all those interested in understanding the scientific evidence for and likelihood of extraterrestrial life this is the most comprehensive and readable book to date *Is There Life on Other Worlds? ... with an Introduction by Isaac Asimov* Poul Anderson, 1963 *Science, Culture and the Search for Life on Other Worlds* John W. Traphagan, 2016-08-26 This book explores humanity's thoughts and ideas about extraterrestrial life paying close attention to the ways science and culture interact with one another to create a context of imagination and discovery related to life on other worlds Despite the recent explosion in our knowledge of other planets and the seeming era of discovery in which we live to date we have found no concrete evidence that we are not alone Our thinking about life on other worlds has been and remains the product of a combination of scientific investigation and human imagination shaped by cultural values particularly values of exploration and discovery connected to American society The rapid growth in our awareness of other worlds makes this a crucial moment to think about and assess the influence of

cultural values on the scientific search for extraterrestrial life Here the author considers the junction of science and culture with a focus on two main themes 1 the underlying assumptions many of which are tacitly based upon cultural values common in American society that have shaped the ways researchers in astrobiology and SETI have conceptualized the nature of their endeavor and represented ideas about the potential influence contact might have on human civilization and 2 the empirical evidence we can access as a way of thinking about the social impact that contact with alien intelligence might have for humanity

The Lost Planets John Wenz,2019-10-08 A fascinating account of the pioneering astronomer who claimed erroneously to have discovered a planet outside the solar system There are innumerable planets revolving around innumerable stars across our galaxy Between 2009 and 2018 NASA's Kepler space telescope discovered thousands of them But exoplanets planets outside the solar system appeared in science fiction before they appeared in telescopes Astronomers in the early decades of the twentieth century spent entire careers searching for planets in other stellar systems In *The Lost Planets* John Wenz offers an account of the pioneering astronomer Peter van de Kamp who was one of the first to claim discovery of exoplanets Van de Kamp working at Swarthmore College's observatory announced in 1963 that he had identified a planet around Barnard's Star the second closest star system to the Sun He cited the deviations in Barnard's star's path wobbles that suggested a large object was lurching around the star Van de Kamp became something of a celebrity appearing on a television show with Mr Wizard Don Henry but subsequent research did not support his claims Wenz describes van de Kamp's stubborn refusal to accept that he was wrong discusses the evidence found by other researchers and explains recent advances in exoplanet detection including transit radial velocity direct imaging and microlensing Van de Kamp retired from Swarthmore in 1972 and died in 1995 at 93 In 2009 Swarthmore named its new observatory the Peter van de Kamp Observatory In the 1990s astronomers discovered and confirmed the first planet outside our solar system In 2018 an exoplanet was detected around Barnard's Star not however the one van de Kamp thought he had discovered in 1963

Terry Pratchett Could Save the World Rebecca Ann Bach,2023-05-22 This monograph contends that attending to Pratchett's work could help to save our world It draws attention to the astonishing capacity of Pratchett's novels

to inspire and argues that Pratchett's fantasy novels directly address many of the most significant challenges people in the world face: the explosion of weapons technology, the myriad issues involved in the envelopment of human life by corporatized information technology, the destructive human inattention to and interactions with the Earth and its life forms, and the problem of devalued labor. Paradoxically, it is Pratchett's choice of fantasy that lets him address the reality of major issues that humanity and the rest of life confront now. Pratchett's novels show us how to better understand and confront the problems the world is contending with. The book will interest both scholars and fans. **Sally Ride** Tam O'Shaughnessy, 2015-10-06

Years before millions of Americans tuned in to watch her historic space flight aboard the Challenger in 1983, Sally Ride stayed up late to watch Neil Armstrong become the first person to walk on the moon. The next morning she woke up to win her first round singles match at a national junior tennis tournament. Sally Ride: A Photobiography of America's Pioneering Woman Astronaut is an intimate journey from her formative years to her final moments. Before she was an astronaut, Sally was a competitive tennis player who excelled at the game to such an extent that Billie Jean King told her she could play on the pro circuit. Before she earned a Ph.D. in physics, she was called an underachiever by her high school classmates. After her first historic space flight, she took a second in 1984. Sally continued to break ground as an inspirational advocate for space exploration, public policy, and science education who fought gender stereotypes and opened doors for girls and women in all fields during the second half of the twentieth century. This vivid photobiography, written by Sally's life writing and business partner Tam O'Shaughnessy, offers an intimate and revealing glimpse into the life and mind of the famously private, book-loving tennis-playing physicist who made history. **Holy Sci-Fi!** Paul J. Nahin, 2014-04-09

Can a computer have a soul? Are religion and science mutually exclusive? Is there really such a thing as free will? If you could time travel to visit Jesus, would you, and should you? For hundreds of years, philosophers, scientists, and science fiction writers have pondered these questions and many more. In *Holy Sci-Fi*, popular writer Paul Nahin explores the fertile and sometimes uneasy relationship between science fiction and religion. With a scope spanning the history of religion, philosophy, and literature, Nahin follows religious themes in science fiction from Feynman to Foucault and from Asimov to Aristotle. An intriguing journey through popular and well-loved books and stories, *Holy Sci-Fi* shows how sci-fi has informed humanity's attitudes towards our faiths, our future, and ourselves. *NASA EP*. United States. National Aeronautics and Space Administration, 1966

Out of This World I.P. Couliano, 2001-05-01 This book takes the reader on a fantastic journey through a wide range of cultures and traditions to examine the phenomenon of ecstatic visionary experiences from Sumerian Gilgamesh and the Taoist Immortals to the imaginative fiction of Jorge Luis Borges. The author provides a comprehensive tour of otherworldly journeys common from immemorial times among shamans, magicians, and witches, and illustrates their connection with such modern phenomena as altered states of consciousness, out-of-body experiences, and near-death experiences. **The Size, Composition, and Surface Features of the Planets Orbiting the Sun** Ellen Foxe, 2006 This
