Conceptual Design Mogens Myrup Andreassen, Claus Thorp Hansen, Philip Cash, 2015-07-03 Maximising reader insights into the theory models methods and fundamental reasoning of design this book addresses design activities in industrial settings as well as the actors involved This approach offers readers a new understanding of design activities and related functions properties and dispositions Presenting a design mindset that seeks to empower students researchers and practitioners alike it features a strong focus on how designers create new concepts to be developed into products and how they generate new business and satisfy human needs Employing a multi faceted perspective the book supplies the reader with a comprehensive worldview of design in the form of a proposed model that will empower their activities as student researcher or practitioner We draw the reader into the core role of design conceptualisation for society for the development of industry for users and buyers of products and for citizens in relation to public systems The book also features original contributions related to exploration conceptualisation and product synthesis Exploring both the power and limitations of formal design process models methods and tools viewed in the light of human ingenuity and cognition the book develops a unique design mindset that adds human understanding to the list of methods and tools essential to design This insight is distilled into useful mindset heuristics included throughout the book

The Urban Lifeworld Peter Madsen, Richard Plunz, 2005-06-29 This volume of scholarly essays the results of detailed research contributes to our understanding of the cultural role of cities by offering a new approach to the analysis of urban experience

The Emergence of a Modern City Henriette Steiner, 2016-03-23 This book is an exploration of how urban life in Copenhagen in the period known as the Golden Age c 1800 to 1850 was experienced and structured socially institutionally and architecturally It draws on a broad historical source material spanning urban anecdotes biography philosophy literature and visual culture to do so The book argues that Copenhagen emerged as a modern city at this time despite the fact that the Golden Age never witnessed the appearance of the main characteristics of the modernisation of cities associated with industrialisation such as street lighting sewer systems and railroads The book outlines the historical and topographical context of Copenhagen in the Golden Age with a special focus on the works of the most prominent architect of the period C F Hansen The characterisation of the city is complemented by investigations into writings of three citizens the philosopher Soren Kierkegaard the novelist Thomasine Gyllembourg and the criminal Ole Kollerod who all take an interest in the city s institutional and urban structures as well as their own place in it From these different sources a picture is painted of urban life and thought at a time when the city began to take on characteristics of ambiguity and alienation in European thinking while at the same time the city itself retained some pre modern motifs of a symbolic order This transformation is set in a larger process of cultural re orientation from traditional Baroque culture to what might be termed Romantic culture The book reconsiders the significance of this transformation for the emergent order of the modern European city in the nineteenth century and thus of the very foundation

Analecta Romana Instituti Danici ,1980 Emergent Practices and Material Conditions in Learning and Teaching with Technologies Teresa Cerratto Pargman,Isa Jahnke,2019-03-21 This book explores the complexities of interacting with digital technologies in the everyday flow of practices in schools, museums and the home. In particular, the authors pay attention to the material conditions of such practices via the exploration of media discourses on information and communication technologies in the classroom, the ongoing digitization of the school, the use of video chat for language learning, the instantiation of CrossActionSpaces in urban science classrooms, the development of symbolic technologies such as the Carbon Footprint Calculator, the design of apps and virtual museums for learning science, the use of text message tools for collaborative learning in teacher education and the design, implementation and evaluation of Augmented Reality apps in outdoor learning. The book is grounded in case studies presented by scholars at the workshop Changing Teaching and Learning Practices in Schools with Tablet Mediated Collaborative Learning, Nordic European and International Views and the workshop Emergent Practices and Material Conditions in Tablet mediated Collaborative Learning and Teaching, both of which have been held at the Computer Supported Collaborative Learning conference CSCL. This volume brings together inspirational and high quality chapters that raise a range of important ideas and showcase the importance of looking beyond technology enhanced learning. Taken together, this volume unpacks a variety of everyday situations by engaging with what is really happening with digital technologies rather than what is expected to happen with them in educational settings. The take away message is a call for research on learning, teaching and digital technologies that enables engagement with the materiality of educational practices and in particular their constitutive relationships that configure the contemporary educational practices of the digital age.
