Rural Planning From An Environmental Systems Perspective:

Rural Planning from an Environmental Systems Perspective Frank B. Golley, Juan Bellot, 2012-12-06 This book synthesizes knowledge from several fields that are crucial to sustainable rural development the physical environment biological and agricultural production rural sociology and economics It takes a systems perspective incorporating systems analysis landscape analysis and soil water and land planning Directed toward graduate students and professionals it provides a source of information and concepts for those concerned with land and water policies and practice It presents an integrated approach using practical and applicable models and methods and takes a middle position between an elementary conceptual approach to land and water management and a highly mathematically advanced treatise based exclusively on system modeling The book is based on almost twenty years of experience in teaching a course on rural planning and the environment the authors being specialists from universities research institutions and companies in Europe and North America

Environmental Issues in the Mediterranean John B. Thornes, John Wainwright, 2004-03 The Mediterranean has been subject to changing human settlement and land use patterns for millennia This book reviews both physical and social aspects of this region in relation to its environment

Measuring Landscapes Andre Botequilha Leita, Joseph Miller, Jack Ahern, Kevin McGarigal, 2012-09-26 This practical handbook bridges the gap between those scientists who study landscapes and the planners and conservationists who must then decide how best to preserve and build environmentally sound habitats Until now only a small portion of the relevant science has influenced the decision making arenas where the future of our landscapes is debated and decided The authors explain specific tools and concepts to measure a landscape s structure form and change over time Metrics studied include patch richness class area proportion patch number and density mean patch size shape radius of gyration contagion edge contrast nearest neighbor distance and proximity These measures will help planners and conservationists make better land use decisions for the future

Nature and Agriculture in the European Union Floor Brouwer, Jan van der Straaten, 2002-01-01 Nature and agriculture both shape the European countryside and one of the main challenges for the years to come will be to strengthen their interaction for the future development of rural areas In this valuable and highly topical book the authors demonstrate how economics and ecology can play a critical role in maintaining and sustaining this relationship The book identifies the dilemmas facing European agriculture and explores their economic and ecological consequences The authors believe a better understanding of these problems will be crucial in recognising the potential options for the future role of agriculture and nature policy and will guide the identification of suitable policy instruments They highlight current threats to the relationship between agriculture and nature such as abandonment and intensification and demonstrate how these problems can be resolved by a rational policy mix The book also provides extensive empirical evidence from four case studies and concludes by scrutinising the major changes in market conditions and the Common Agricultural Policy which could upset this important but fragile balance between agriculture and

nature **Science of Ecosystem-based Management** Alan Desbonnet, Barry A Costa-Pierce, 2008-01-12 Science for Ecosystem based Management Narragansett Bay in the 21st Century addresses the broad problem of coastal nutrient pollution In the U S approximately two thirds of the coastal rivers and bays are moderately to severely degraded from nutrient pollution However debates continue about how large a problem nutrient pollution is and what actions to take and since effective management requires decisions at a local scale an in depth case study can provide valuable guidance Narragansett Bay is one of the best studied estuaries in the world Rhode Island has been developing regulatory and management actions to reduce nutrient inputs particularly those of nitrogen to the waters of Narragansett Bay This book was developed in response to a symposium addressing this mandate with coastal estuarine scientists and environmental management agency personnel The contributors use long term data sets to discuss the interactions among biological ecological chemical and physical processes and discuss what is known about nutrient inputs to the bay ecosystem the impacts related to nutrient inputs and how the ecosystem might respond to a sudden reduction in these inputs

Quantifying Environmental Impact Assessments Using Fuzzy Logic Richard B. Shepard, 2006-10-14 Environmental impact assessments are required for a wide range of projects throughout the world These assessments have increasingly involved complex political decision making and incorporated values and beliefs of both stakeholders and interested parties However the results are often ineffective because values and beliefs are not easily quantifiable and decisions are considered subjective This analysis recognizes these problems and proposes practical methods based on fuzzy logic that will enable people preparing assessments to define terms and quantify opinions and input so that they are agreed upon by all involved parties Fuzzy logic also quantifies the complex environmental economic and social conditions that are present and are predicted by project alternatives The author places special emphasis on the types of issues that frequently arise in NEPA environmental assessments and environmental impact statements and in similar regulations that are used in jurisdictions regionally and internationally The new methods are intended to reduce the time and cost of assessments while producing justifiable results First issues related to current environmental impact assessment methods are discussed Then the book discusses how lessons learned from computational intelligence can address these problems It describes how a systematic logical approach to environmental assessment can be applied to a variety of complex situations Finally the design and implementation of a more objective and powerful assessment is demonstrated through a worked example Explanations of computational intelligence techniques and discussions of helpful software are intended to benefit those people actually preparing and using environmental assessments in language that makes the process transparent and transferable to all types of systems

Changing Land Use Patterns in the Coastal Zone G. S. Kleppel, M. Richard DeVoe, Mac V. Rawson, 2007-01-15 Coastal ecosystems make up some of the most important and yet most endangered regions in the world The protection of the unique processes that take place in these ecosystems requires that partnerships be formed among ecologists resource

managers and planners Experienced in the challenges of coastal system analysis the contributors to this book provide multidisciplinary guidance on the assessment and management of environmental impacts caused by development Each chapter examines an issue important to these fragile ecosystems first presenting a non technical summary of the issue and a review of the current state of the knowledge then following with data and a more detailed consideration of the topic Functioning both as a practical guide accessible to nonscientists and as a rigorous scientific source book *Changing Land Use Patterns in the Coastal Zone* will be useful to ecologists urban and regional planners resource managers policymakers and students While many of the case studies included in this volume are drawn from studies in the southeastern United States the examples and lessons provided will be relevant to those working in all coastal environments

Linking Restoration and Ecological Succession Lawrence R. Walker, Joe Walker, Richard J. Hobbs, 2007-10-16 While studies of restoration and ecological succession have been published independently there is much overlap between these approaches that has not been adequately explored *Linking Restoration and Ecological Succession* integrates practical information from restoration projects around the world with the latest developments in successional theory This innovative book recognizes the critical roles of disturbance ecology landscape ecology ecological assembly invasion biology ecosystem health and historical ecology in habitat restoration and argues that restoration within a successional context will best utilize the lessons from each of these disciplines To successfully restore an ecosystem that needs minimal care the temporal dynamics of successional processes must be considered By re examining restoration in the light of succession the authors hope to encourage the development of new approaches to the practice of restoration supported by solid ecological principles

The Longleaf Pine Ecosystem Shibu Jose, Eric J. Jokela, Deborah L. Miller, 2007-09-09 This book unites a wealth of current information on the ecology silviculture and restoration of the Longleaf Pine ecosystem The book includes a discussion of the significant historical social and political aspects of ecosystem management making it a valuable resource for students land managers ecologists private landowners government agencies consultants and the forest products industry

Wildlife Study Design Michael L. Morrison, William M. Block, M. Dale Strickland, Bret A. Collier, Markus J. Peterson, 2008-03-21 We developed the first edition of this book because we perceived a need for a compilation on study design with application to studies of the ecology conservation and management of wildlife We felt that the need for coverage of study design in one source was strong and although a few books and monographs existed on some of the topics that we covered no single work attempted to synthesize the many facets of wildlife study design We decided to develop this second edition because our original goal synthesis of study design remains strong and because we each gathered a substantial body of new material with which we could update and expand each chapter Several of us also used the first edition as the basis for workshops and graduate teaching which provided us with many valuable suggestions from readers on how to improve the text In particular Morrison received a detailed review from the graduate students in his Wildlife Study Design course at Texas A M University We also paid heed to the reviews of the
