Phillips, Stephen P. Norris, John S. Macnab, 2010-09-02 Science education at school level worldwide faces three perennial problems that have become more pressing of late These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students The rst problem is the increasing intellectual isolation of science from the other subjects in the school curriculum Science is too often still taught didactically as a collection of pre determined truths about which there can be no dispute As a consequence many students do not feel any ownership of these ideas Most other school subjects do somewhat better in these regards For example in language classes students suggest different interpretations of a text and then debate the relative merits of the cases being put forward Moreover ideas that are of use in science are presented to students elsewhere and then re taught often using different terminology in science For example algebra is taught in terms of  $x, y, z$  in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where  $p, v, t$  are used The result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable Synthetic Organic Chemistry and the Nobel Prize, Volume 3 John G. D'Angelo, 2024-12-19 The Nobel Prize is the highest award in science as is the case with nonscience fields too and it is therefore arguably the most internationally recognized award in the world This unique set of volumes focuses on summarizing the Nobel Prize within organic chemistry as well as the specializations within this specialty Any reader researching the history of the field of organic chemistry will be interested in this work Furthermore it serves as an outstanding resource for providing a better understanding of the circumstances that led to these amazing discoveries and what has happened as a result in the years since **Integrate the Internet Across the Content Areas** Lynn Van Gorp, 2007-07-01 Bring your classroom into the 21st century using the Internet Useful strategies An annotated list of teacher tested websites and easy to follow lesson plans for all content areas make this resource a perfect guide for integrating the Internet into the curriculum Student activities student research suggestions and 24 model lessons that clearly demonstrate how to effectively use websites are provided along with information on teacher and student resource sites The open ended activities help students develop thinking skills and learn to search the Web and evaluate websites Topics covered include computer management differentiation safety issues searching the Internet copyright guidelines and more The Teacher Resource CD provided includes reproducible teacher resource materials 296pp *Recruiting, Training, and Retention of Science and Technology Librarians* Patricia A.
