Williams,1983 **Foundations and Applications of Medical Biochemistry in Clinical Practice** John Neustadt Nd,Steve Pieczenik MD PhD,2009-06-13 The culmination of more than ten years of research by the authors this book describes for the first time ever the scientific basis and clinical applications of medical biochemistry a fundamental paradigm shift in medicine This paradigm shift is so revolutionary that it has been called the Neustadt Pieczenik Paradigm which is the fusion and clinical applications of biochemistry thermodynamics physiology fractal enzymology nutritional medicine and laboratory testing to identify and correct the underlying causes of many diseases that are considered genetic in nature eg Phenylketonuria and those that are not considered genetic eg mature onset asthma depression fatigue In this new medicine doctors must reject the failed purely symptomatic treatments they learned in medical school and focus on learning and treating the underlying biochemical causes of disease From the first documented clinical observations of biochemical individuality in the early 1900s to the development of sophisticated biochemical tests the authors provide a detailed and stunning analysis of a new medical model to help millions and cure our ailing healthcare system They uniquely contrast the conventional medical approach with the functional biochemical approach through extensive case studies on depression arthritis migraine headaches seizures rashes and more This book is a must read for physicians medical students nutritionists and anyone looking to take charge of their health Biochemistry of the Eye Elaine R.

Berman,2013-11-22 My first introduction to the eye came more than three decades ago when my close friend and mentor the late Professor Isaac C Michaelson convinced me that studying the biochemistry of ocular tissues would be a rewarding pursuit I hastened to explain that I knew nothing about the subject since relatively few basic biochemical studies on ocular tissues had appeared in the world literature Professor Michaelson assured me however that two books on eye biochemistry had already been written One of them a beautiful monograph by Arlington Krause 1934 of Johns Hopkins Hospital is well worth reading even today for its historical perspective The other published 22 years later was written by Antoinette Pirie and Ruth van Heyningen 1956 whose pioneering achievements in eye biochemistry at the Nuffield Laboratory of Ophthalmology in Oxford England are known throughout the eye research community and beyond To their credit are classical investigations on retinal corneal and lens biochemistry beginning in the 1940s and continuing for many decades thereafter Their important book written in 1956 on the Biochemistry of the Eye is a volume that stood out as a landmark in this field for many years In recent years however a spectacular amount of new information has been generated in ocular biochemistry Moreover there is increasing specialization among investigators in either a specific field of biochemistry or a particular ocular tissue
