Cultural, Social, and Political Perspectives in Science Education

Kathrin Otrell-Cass, Martin Krabbe Sillasen, Auli Arvola Orlander, 2017-10-20 This book presents a collection of critical thinking that concern cultural social and political issues for science education in the Nordic countries The chapter authors describe specific scenarios to challenge persisting views interrogate frameworks and trouble contemporary approaches to researching teaching and learning in science Taking a point of departure in empirical examples from the Nordic countries the collection of work is taking a critical sideways glance at the Nordic education principles Critical examinations target specifically those who are researching in the fields of science education research to question whether conventional research approaches foci and theoretical approaches are sufficient in a world of science education that is neither politically neutral nor free of cultural values Attention is not only on the individual learner but on the cultural social and political conditions and contexts in science education The different chapters review debates and research in teacher education school teaching and learning including when external stakeholders are involved Even though the chapters are contextualized in Nordic settings there will be similarities and parallels that will be informative to the international science education research community

Physics for the Inquiring Mind Eric M. Rogers, 2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgasbord of tidbit they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific knowledge is built up by building some scientific knowledge of his own by

reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking Physics for the Inquiring Mind is a book for the inquiring mind of students in college and for other readers who want to grow in scientific wisdom who want to know what physics really is

Activity Theory in Formal and Informal Science Education Katerina Plakitsi, 2013-09-04 The purpose of this book is to establish a broader context for rethinking science learning and teaching by using cultural historical activity theoretic approach Activity theory already steps in its third generation and only a few works have been done on its applications to science education especially in Europe The context takes into account more recent developments in activity theory applications in US Canada Australia and Europe The chapters articulate new ways of thinking about learning and teaching science i e new theoretical perspectives and some case studies of teaching important scientific topics in for compulsory education The ultimate purpose of each chapter and the collective book as a whole is to prepare the ground upon which a new pedagogy in science education can be emerged to provide more encompassing theoretical frameworks that allow us to capture the complexity of science learning and teaching as it occurs in and out of schools The book captures the dialogic and interactive nature of the transferring the activity theory to both formal and informal science education It also contributes to the development of innovative curricula school science textbooks educational programs and ICT s materials As a whole the book moves theorizing and practicing of science education into new face and uncharted terrain It is recommended to new scholars and researchers as well as teachers researchers
