Jozef IJsewijn. Humanism in the Low Countries Jozef IJsewijn, 2015-09-23 Professor Jozef IJsewijn's most relevant essays collected in one volume Jozef IJsewijn Humanism in the Low Countries contains twenty one essays written by the late Professor Jozef IJsewijn during the period 1966-1996 All essays were selected by his pupil Professor Gilbert Tournoy who collaborated with him since the foundation of the Seminarium Philologiae Humanisticae in 1966 until his untimely death in 1998 They are now published in one volume in homage to the most brilliant scholar in the field of Neo Latin Studies of the twentieth century A number of contributions focus on the life and or work of a single humanist from the Netherlands others have a more general nature and deal with the very beginning and the later blossoming of Neo Latin literature in the Low Countries or with the relationship between humanism in the Low Countries and in other European countries Hidden in a less known journal or a Festschrift for a colleague these studies are nowadays not always easy to find This volume brings the most relevant essays of IJsewijn together and aims to contribute to the research and study of humanism and Neo Latin literature in the Low Countries

Low-Dimensional Systems Tobias Brandes, 2008-01-11 Experimental progress over the past few years has made it possible to test a number of fundamental physical concepts related to the motion of electrons in low dimensions The production and experimental control of novel structures with typical sizes in the sub micrometer regime has now become possible In particular semiconductors are widely used in order to confine the motion of electrons in two dimensional heterostructures The quantum Hall effect was one of the first highlights of the new physics that is revealed by this confinement In a further step of the technological development in semiconductor heterostructures other artificial devices such as quasi one dimensional quantum wires and quantum dots artificial atoms have also been produced These structures again differ very markedly from three and two dimensional systems especially in relation to the transport of electrons and the interaction with light Although the technological advances and the experimental skills connected with these new structures are progressing extremely fast our theoretical understanding of the physical effects such as the quantum Hall effect is still at a very rudimentary level In low dimensional structures the interaction of electrons with one another and with other degrees of freedoms such as lattice

vibrations or light gives rise to new phenomena that are very different from those familiar in the bulk material. The theoretical formulation of the electronic transport properties of small devices may be considered well established provided interaction processes are neglected.

Very Low-Mass Stars and Brown Dwarfs Rafael Rebolo, Maria Rosa Zapatero-Osorio, 2000-11-27 This volume provides a state of the art review of our current knowledge of brown dwarfs and very low mass stars. The hunt for and study of these elusive objects is currently one of the most dynamic areas of research in astronomy for two reasons. Brown dwarfs bridge the gap between stars and planets and they may constitute an important part of the dark matter of the Universe. This volume presents review articles from a team of international authorities who gathered at a conference in La Palma to assess the spectacular progress that has been made in this field in the last few years.

The Jesuits of the Low Countries Rob Faesen, Leo Kenis, 2012 From 3 until 5 December 2009 an international colloquium was organised at the Faculty of Theology and Religious Studies KU Leuven which intended to highlight and discuss the impact of the Society of Jesus on the development of cultural, scientific and political life in the Low Countries. The colloquium not only aimed to bring together specialists in the various fields of Jesuitica research but also organised a meeting between the people committed to scientific research and those who disclose archives and other information sources enabling new research. Some of the finest scholars in Jesuit studies presented the results of their research in a number of lectures. The current volume contains a selection of these lectures dealing with a broad spectrum of subjects from Jesuit spirituality to the Jesuit contribution to the science of law, political thought and the visual arts to education, mathematics and architecture. Attention is paid to the role of the Jesuits in the development of the printing press, their relation with Louvain's Faculty of Theology and their position in the Jansenist controversies as well as to their expansion abroad in the Missio Hollandica in South Wales and in the mission to China. Furthermore, the book includes a number of presentations from the workshops specifically concerning archives and databases related to the history of the Jesuits in the Low Countries.
