The Invisible Rainbow Arthur Firstenberg, 2020-02-28 The most misunderstood force driving health and disease The story of the invention and use of electricity has often been told before

but never from an environmental point of view The assumption of safety and the conviction that electricity has nothing to do with life are by now so entrenched in the human psyche that new research and testimony by those who are being injured are not enough to change the course that society has set Two increasingly isolated worlds that inhabited by the majority who embrace new electrical technology without question and that inhabited by a growing minority who are fighting for survival in an electrically polluted environment no longer even speak the same language In *The Invisible Rainbow* Arthur Firstenberg bridges the two worlds In a story that is rigorously scientific yet easy to read he provides a surprising answer to the question How can electricity be suddenly harmful today when it was safe for centuries Bad Medicine Christopher

Wanjek,2003-04-07 Christopher Wanjek uses a take no prisoners approach in debunking the outrageous nonsense being heaped on a gullible public in the name of science and medicine Wanjek writes with clarity humor and humanity and simultaneously informs and entertains Dr Michael Shermer Publisher *Skeptic* magazine monthly columnist Scientific American author of *Why People Believe Weird Things* Prehistoric humans believed cedar ashes and incantations could cure a head injury Ancient Egyptians believed the heart was the center of thought the liver produced blood and the brain cooled the body The ancient Greek physician Hippocrates was a big fan of bloodletting Today we are still plagued by countless medical myths and misconceptions *Bad Medicine* sets the record straight by debunking widely held yet incorrect notions of how the body works from cold cures to vaccination fears Clear accessible and highly entertaining *Bad Medicine* dispels such medical convictions as You only use 10% of your brain CAT PET and MRI scans all prove that there are no inactive regions of the brain not even during sleep Sitting too close to the TV causes nearsightedness Your mother was wrong Most likely an already nearsighted child sits close to see better Eating junk food will make your face break out Acne is caused by dead skin cells hormones and bacteria not from a pizza with everything on it If you don't dress warmly you'll catch a cold Cold viruses are the true and only cause of colds Protect yourself and the ones you love from bad medicine the brain you save may be your own Riding the Diabetes Rollercoaster Helen Cooper, Robert Geyer,2018-04-19 This work includes foreword by Ian

Botham OBE former England Cricket Captain and father of a daughter with Type 1 Diabetes This groundbreaking book reveals how science and medicine have traditionally tried to make diabetes simple and orderly despite its obvious messiness and complexity The result has left patients carers and health professionals confused and frustrated Using complexity science *Riding the Diabetes Rollercoaster* provides a radical new approach to understanding and managing diabetes that embraces its uncertainties and challenges From a complexity perspective the diabetes rollercoaster is normal and is a mirror of life itself Learning to embrace and use the tools of complexity can completely alter your approach to diabetes Despite huge amounts of research funding and effort diabetes like many other chronic illnesses refuses to go away or even to get any easier to deal with Health professionals have grown increasingly frustrated with their inability to develop radical improvements patients and carers struggle to comply with complicated self management regimes We believe that Complexity

offers a way forward Learning to balance rather than control diabetes is the ultimate goal of diabetes management Helen Cooper and Robert Geyer in the Preface

A Public Health Perspective on End of Life Care Joachim Cohen, Luc Deliens, 2012-01-19 Worldwide more than 50 million people die each year and it is estimated on the basis of the conditions leading to death that up to 60% of them could benefit from some form of palliative care It is a public health challenge to ensure that these people can access good palliative or end of life care Pursuing good population health essentially also implies striving for a good enough death and a good quality of care at the end of life Safeguarding a good quality of the end of life for patient populations for whom it is appropriate requires a public health approach In most developed countries ageing populations that increasingly die from chronic diseases after a prolonged often degenerative dying trajectory make up the public health challenges for palliative care The very large baby boom generation will soon reach old age and can be expected to pose strong demands regarding the circumstances and care at their end of life Only by applying a public health approach to palliative care instead of individual patient perspectives can societies successfully help to organize and plan end of life care in accordance with these aspirations A Public Health Perspective on End of Life Care presents a synthesis and overview of relevant research and empirical data on the end of life that can bear a basis for a more systematic public health of the end of life The book focuses on population health rather than clinical interventions or other aspects of individual health and discusses studies using different methodologies not only epidemiological research The focus is on the quality of the end of life of populations in particular from social sciences environmental sciences and humanities perspectives
