Lone Star Planet & Four Day Planet H. Beam Piper, 2023-12-26 In *Lone Star Planet* and *Four Day Planet* H Beam Piper merges science fiction with social commentary weaving a narrative rich in intrigue and cultural observation Piper s distinctive prose blends

engaging storytelling with insightful analysis of societal structures reflecting the tensions between individualism and collectivism Set against the backdrop of vividly imagined worlds these tales explore the repercussions of planetary colonization and the complexities of interstellar human relations showcasing Piper's deft ability to reflect contemporary anxieties through speculative fiction H Beam Piper a pioneer of science fiction in the mid 20th century drew inspiration from his own experiences in a rapidly changing society His military background and personal skepticism toward authoritative systems informed his writing granting him the perspective to critique socio political dynamics in the literary context of the Cold War era Piper's work not only entertains but also provokes thought regarding humanity's future and the sociopolitical landscapes we create Both stories are essential reading for fans of speculative fiction and those intrigued by the interplay between society and technology Piper's visionary narratives invite readers to question prevailing norms and explore the implications of survival in unfamiliar environments making this collection a vital contribution to the genre

Radial-velocity Searches for Planets Around Active Stars Raphaëlle D. Haywood, 2016-07-18 This thesis develops new and powerful methods for identifying planetary signals in the presence of noise generated by stellar activity and explores the physical origin of stellar intrinsic variability using unique observations of the Sun seen as a star In particular it establishes that the intrinsic stellar radial velocity variations mainly arise from suppression of photospheric convection by magnetic fields With the advent of powerful telescopes and instruments we are now on the verge of discovering real Earth twins in orbit around other stars The intrinsic variability of the host stars themselves however currently remains the main obstacle to determining the masses of such small planets The methods developed here combine Gaussian process regression for modeling the correlated signals arising from evolving active regions on a rotating star and Bayesian model selection methods for distinguishing genuine planetary signals from false positives produced by stellar magnetic activity The findings of this thesis represent a significant step towards determining the masses of potentially habitable planets orbiting Sun like stars
