Looking into the Seeds of Time Y. S. Brenner, 2021-12-16 This stunning refreshing work combines the history of economics and the practice of modern development It is predicated on Brenner's view that there is no individual freedom without economic security and that such security depends upon progress in both the natural and social sciences Social institutions determine the pace and direction of technological advancement and scientific and technological achievements determine which forms of social reorganization are possible and which are illusory As all living is action and living implies choices any theory of development must start with the person Economic laws obtain only in relation to specific forms of social existence Advanced societies are technically capable of providing for basic needs but are not yet convinced of their ability to do so Modern life still reflects the fears of a society still trying to escape the anxieties demons and ghosts of a long dark era of unemployment and starvation The problem of development is the contradiction between technological potentials and cultural inheritances *Looking into the Seeds of Time* was originally written with the belief that the growing mastery of nature by humanity would curb egoistic impulses and replace competitive with cooperative goals While the same spirit pervades this new edition the work reveals how political as well as economic processes make the goals of prosperity harder to achieve The work reveals a rare insight into the mechanisms of the marketplace and how they can be examined in a comparative historical context across nations as different as the United States Great Britain and Japan and from the Reformation to the modern era of bourgeois consolidation This is institutional economics at its very best

The Concept of 'God' Vinoth, 2018-02-02 God the supernatural being the perfect the omnipotent and the omniscient originator and ruler of the universe is the object of worship in almost all religions across the world Usually people understand God through the religions they're born in This way they get to learn how and why their Gods created reality and put them in it But is this the only possible way to understand the entity What if one takes an alternate route to understand God What if one first understands the reality God created the reality that everything and everyone's a part of and then identifies the entity itself Reality includes everything around and inside it and inevitably includes us Understanding the reality requires a metaphysical analysis of life and the universe and metaphysics reaches an incredibly new level if the knowledge of the Western sciences is merged with the everlasting ideas of the Eastern spiritual philosophies With multiple perspectives making the reader constantly inquisitive *The Concept of God* merges the knowledge of science and spirituality to understand the nature of life

and reality and then finds out who the all powerful God is *The Crises of the Christ* George Campbell Morgan,1903
