Ellen Heber-Katz

Loss And Restoration Of Regenerative Capacity In Tissue And Organs Of Animals:

Loss and Restoration of Regenerative Capacity in Tissues and Organs of Animals Lev Vladimirovich Polezhaev, 1972 This well illustrated monograph is the first summary in English of L V Polezhaev's important but lesser known work on the regenerative phenomena in mammalian forms conducted since World War II During this period Soviet research underwent a pronounced shift in emphasis from basic biological studies based primarily upon amphibians to more practically oriented problems in mammalian systems Polezhaev's experimentation underwent a corresponding shift but the focus on restoration of lost regenerative capacity was retained since his earlier work which is also reviewed here on limb regeneration in frogs Following a theoretical discussion the monograph centers upon the author's most profound innovations a successful method for producing bone to heal large skull defects original research on heart regeneration and trials in the restoration of limb regeneration following X irradiation Methods in Mammalian Reproduction Joseph C. Jr. Daniel, 2012-12-02 Methods in Mammalian Reproduction presents some of the techniques for manipulating analyzing observing testing and generally experimenting with mammalian mothers and their gametes and embryos Mammalian reproduction involves an intimate relationship between mother and embryo The first 18 chapters are arranged in an order that follows a developmental sequence from oocyte to fetal organs and the remaining seven chapters deal with the maternal side of the relationship With strong focus on laboratory rodents and lagomorphs the book starts with an introduction to in vitro oocyte maturation and experimental production of mammalian parthenogenetic It goes on to describe the microtechniques in pre implantation of embryos production of chimeras techniques for early embryonic tissue separation mammalian embryo preservation by freezing and in vitro development of whole mouse embryos beyond the implantation stage Chapters 11-15 discuss the in vitro implantation of mouse blastocysts advances in rabbit embryo and in large mammal embryo cultures embryo transfer in large domestic mammals and manipulation of marsupial embryos and pouch young The following chapters cover reproduction experiments using marsupials domestic farm species and primates including humans Finally the concluding chapters tackle the use of amniocentesis in prenatal diagnosis collection and analysis of female genital tract secretions analysis of antifertility action of intrauterine devices and surgical induction of endometriosis This book will be helpful to students teachers researchers and clinical researchers who demand for more and better procedures for analysis of mammalian reproduction **Regenerative Biology and Medicine** David L. Stocum, 2012-06-07 Regenerative Biology and Medicine Second Edition Winner of a 2013 Highly Commended BMA Medical Book Award for Medicine discusses the fundamentals of regenerative biology and medicine It provides a comprehensive overview which integrates old and new data into an ever clearer global picture The book is organized into three parts Part I discusses the mechanisms and the basic biology of regeneration while Part II deals with the strategies of regenerative medicine developed for restoring tissue organ and appendage structures Part III reflects on the achievements of regenerative biology and medicine future challenges

bioethical issues that need to be addressed and the most promising developments in regenerative medicine The book is designed for multiple audiences undergraduate students graduate students medical students and postdoctoral fellows and research investigators interested in an overall synthesis of this field It will also appeal to investigators from fields not directly related to regenerative biology and medicine such as chemistry informatics computer science mathematics physics and engineering Highly Commended 2013 BMA Medical Book Award for Medicine Includes coverage of skin hair teeth cornea and central neural tissues Provides description of regenerative medicine in digestive respiratory urogenital musculoskeletal and cardiovascular systems Includes amphibians as powerful research models with discussion of appendage regeneration in amphibians and mammals *The Physiology of Bioelectricity in Development, Tissue Regeneration and Cancer* Christine E. Pullar, 2016-04-19 Recent advances in technology have led to the unprecedented accuracy in measurements of endogenous electric fields around sites of tissue disruption State of the art molecular approaches demonstrate the role of bioelectricity in the directionality and speed of cell migration proliferation apoptosis differentiation and orientation New informat Organ Regeneration L. D. Liozner, 2013-03-09 The main theme of this monograph conditions of regeneration of organs in mammals reflects an area of increasing emphasis which permeates much current Soviet research on regeneration The introduction of this theme goes back about 25 years and emphasis on the influence of environmental conditions upon regenerative processes has fluctuated until the mid 1960s when the viewpoints on this subject were established in much the same form as they are expressed in this book For years Russian regeneration research has been characterized by the presence of several dominant and often conflicting schools of thought Since an acquaintance with these makes the interpretation of many of the theoretical implications of this book particularly in the introductory and concluding chapters considerably clearer those not familiar with the Russian literature might profit by reading my brief survey of this field Carlson B M 1968 Regeneration research in the Soviet Union Anat Rec 160 665 674 **Regeneration: Stem Cells and Beyond** Ellen Heber-Katz, 2012-12-06 In this issue of Current Topics in Microbiology and Immunology the authors present a unique range of examples of the regenerative response and the role of stem cells from the amphibian to human It seems that all roads lead to cells that have the plasticity to become something else not only in the amphibian but also in the mammal Biology Bulletin of the Academy of Sciences of the USSR.
