Lost World Found:

San Representation Keyan Tomaselli, Michael Wessels, 2017-12-22 The San or Bushmen of southern Africa have exerted a fascination over generations of writers and scholars from novelists and anarchists to ethnologists and geneticists and also occupy a special place in the popular imagination as the First People and the contemporary remnant of spiritual and natural man The ways in which particular groups of people from southern Africa have been traditionally categorised and positioned as objects of scrutiny by a range of academic disciplines is increasingly being contested and questioned There is a growing awareness of the cultural economic and genetic entanglement of the peoples of the region This book examines how San and Khoe people are represented by others as well as by those who identify as San or Khoe The book interrogates the ways in which disciplines through their methodologies and ways of authorising knowledge not only discover or reveal knowledge but produce it in ways that involve complex and often ambiguous relationships with power structures and forms of intellectual symbolic and cultural capital One major trend that emerges is that the San and Khoe can no longer be seen as people of the past but have to be acknowledged as contemporary and socially situated individuals and communities who are increasingly contesting the representations which others have imposed on them This book was originally published as a special issue of *Critical Arts A Journal of South North Cultural and Media Studies* **Clinical Chaos** Linda Chamberlain, Michael R.

Butz, 2016-01-28 Psychology and the social sciences are in need of a new foundation one that provides a better model for understanding complex behavior Chaos theory and its newest permutation complexity theory offers an innovative exciting and potentially revolutionary leap forward in the evolution of scientific thought In Clinical Chaos therapists and theoreticians from various areas in the social sciences will explore the relevance and implications for non linear dynamics in observing explaining and understanding human behavior At last the scientific search can again encompass surprise transformation unpredictability and pattern This book is intended to introduce social scientists to chaos through paths that are already familiar By linking chaos theory with existing psychological theories and established areas of clinical pursuit Clinical Chaos emphasizes the relevance of this new science in providing a more flexible useful model for complexities of life The

The Dakota Hunter Hans Wiesman, 2020-01-10 A tale of a lifelong passion for a WWII aircraft that changed the author's life It is almost like an adventure novel except it is true Air Classics This book tells the story of a Dutch boy who grew up during the 1950s in postwar Borneo where he had frequent encounters with an airplane the Douglas DC 3 a k a the C 47 Skytrain or Dakota of World War II fame For a young boy living in a remote jungle community the aircraft reached the proportions of a romantic icon as the essential lifeline to a bigger world for him the beginning of a special bond In 1957 his family left the island and all its residual wreckage of World War II and he attended college in The Hague After graduation he started a career as a corporate executive and met the aircraft again during business trips to the Americas His childhood passion for the Dakota flared up anew and the fascination pulled like a magnet As if predestined or maybe just looking for an excuse to come closer he began a business to salvage and convert Dakota parts which meant first of all finding them As the demand for these war relic parts and cockpits soared he began to travel the world to track down surplus crashed or derelict Dakotas He ventured deeper and deeper into remote mountains jungles savannas and the seas where the planes are found usually as ghostly wrecks but sometimes still in full commercial operation In hunting the mythical Dakota he often encountered intimidating or dicey situations in countries plagued by wars or revolts others by arms and narcotics trafficking

warlords and conmen The stories of these expeditions take the reader to some of the remotest spots in the world but once there one is often greeted by the comfort of what was once the West's apex in transportation however now haunted by the courageous airmen of the past Exhibitors Daily Review ,1926 **Smithson's Gamble** Tom D. Crouch,2025-04-29

Discover the incredible history of the Smithsonian as it grew to meet the needs of a nation Follow the fascinating growth and development of the world's largest museum and research complex during its first 60 years The English chemist and mineralogist James Smithson never visited the United States yet he bequeathed his estate to the country to establish the Smithsonian Institution The rest is history told in rich detail in *Smithson's Gamble* This book reveals how as it defined a role rooted in curiosity and exploration the Smithsonian helped to shape the nation's developing identity The Smithsonian evolved from a small narrowly focused organization into an institution leading the way in fields from astrophysics to zoology Smithsonian researchers and the hundreds of citizen scientists who they recruited created a collection that documented the natural and human history of a continent The American conservation movement and a national weather service are rooted at the Smithsonian *Smithson's Gamble* is filled with fascinating characters twists and turns and moments of triumph and tragedy complete with political machinations a bit of backstabbing accusations of murder and the occasional scandal Tom D Crouch a Smithsonian veteran of almost 45 years paints a robust picture of a unique American establishment and its lasting legacies He chronicles the trials and errors of an increasingly complex institution and all the incredible joys and innovations resulting from Smithson's gamble *American Silent Horror, Science Fiction and Fantasy Feature Films, 1913-1929* John T. Soister, Henry Nicolella, Steve Joyce, 2014-01-10 During the Silent Era when most films dealt with dramatic or comedic takes on the boy meets girl boy loses girl theme other motion pictures dared to tackle such topics as rejuvenation revivication mesmerism the supernatural and the grotesque *A Daughter of the Gods* 1916 *The Phantom of the Opera* 1925 *The Magician* 1926 and *Seven Footprints to Satan* 1929 were among the unusual and startling films containing story elements that went far beyond the realm of highly unlikely Using surviving documentation and their combined expertise the authors catalog and discuss these departures from the norm in this encyclopedic guide to American horror science fiction and fantasy in the years from 1913 through 1929 Mountains James Fargo Balliett, 2016-07-01 Always awe inspiring mountainous areas contain hundreds of millions of years of history stretching back to the earliest continental landforms This book shows how mountains are characterized by their distinctive geological ecological and biological conditions Often they are so large that they create their own weather patterns They also store nearly one third of the world's freshwater in the form of ice and snow on their slopes Despite their daunting size and often formidable climates mountains are affected by growing local populations as well as distant influences such as air pollution and global climate change Three detailed case studies are presented The first shows how global warming in East Africa is harming Mount Kenya's regional population which relies on mountain runoff to irrigate farms for subsistence crops The second examines the fragile ecology of the South Island Mountain in New Zealand's

Southern Alps and how development threatens the region's endemic plant and animal species The third discusses the impact of mountain use over time in New Hampshire's White Mountains where management efforts have been used to limit the growing footprint of millions of annual visitors and alpine trekkers

Perfumery Steve Van Toller, George H. Dodd, 2013-04-17 THE SENSE OF SMELL The nose is normally mistakenly assumed to be the organ of smell reception It is not The primary function of the nose is to regulate the temperature and humidity of inspired air thereby protecting the delicate linings of the lungs This is achieved by the breathed air passing through narrow passageways formed by three nasal turbinates in each nostril The turbinates are covered by spongy vascular cells which can expand or contract to open or close the nasal pathways The olfactory receptors innervated by the 1st cranial nerve are located at the top of the nose There are about 50 million smell receptors in the human olfactory epithelia the total size of which in humans is about that of a small postage stamp with half being at the top of the left and half at the top of the right nostril The receptive surfaces of olfactory cells are ciliated and extend into a covering layer of mucus There is a constant turnover of olfactory cells Their average active life has been estimated to be about 28 days
