QUANTITATIVE TECHNIQUES FOR MANAGERIAL DECISIONS, SECOND EDITION KHANNA, R. B., 2012-05-19 This book is specially designed for a course in Quantitative Techniques taught to MBA students It provides the students with a thorough introduction to basic quantitative tools required to perform analytical evaluations and arrive at logical decisions The second edition of the book essentially retains the flavour of the first edition Concepts have been explained in an easy to understand language and

emphasis is on practical applications rather than rigorous mathematical treatment As far as possible detailed proofs and axioms associated with pure mathematics have been avoided The text in the second edition has been suitably modified for giving better clarity Nearly fifty solved examples have been added to various chapters to enable students to understand the nuances of problem solving Fifty unsolved problems have also been added to give ample scope to the student for practice The book also includes chapters on transportation models assignment models and network analysis

KEY FEATURES Learning objectives at the beginning of each chapter enable students to focus on important points of a chapter Case studies and real life problems to connect students to the real world situations Worked examples to enhance student comprehension of the subject Numerous well balanced chapter end exercises with answers to help students attain confidence and master the concepts Illustrations on solutions to problems with the help of computer software Summary at the end of each chapter to help students review the key concepts

Essentials of Logistics and Management, Third Edition Corynne Jaffeux, Philippe Wieser, 2012-12-11 The logistician plays a critical role in the growth of his or her company in this third edition of Essentials of Logistics the conceptual framework in which all the stakes and themes of logistics is systematically analyzed with a strong focus on the role of the supply chain Indeed many elements are critical to the successful logistical strategy customer relation management interactive information support production optimization and process development vision strategy and operations management and human resources and resource allocation Growing out of a successful course given by the International Institute for the Management of Logistics IML of the Swiss Federal Institute of Technology EPFL in Lausanne and by the Ecole des Ponts ParisTech ENPC the purpose of this book is to present a methodology allowing the reader to understand and act based on the critical factors embedded in the design of strategy Concepts are thus combined with

practical examples Transversal vision and detailed case studies highlight the main themes of modern logistics and daily preoccupations of logisticians The book is addressed to all professionals of logistics managers planners and engineers as well as to graduate students specializing in the field

Analysis of Water Resource Systems L. Votruba, 1988-09-01 Water resource systems research provides a basis for rational water management in large basins The design and operation of water resource systems are both the most complicated and the most important tasks of water management This book deals with the basic issues involved in the application of systems sciences to water management A survey of the systems sciences the general systems theory cybernetics systems engineering operations research and systems analysis is presented as well as the methods for water resource systems analysis and for water resource systems analysis and for their evaluation The mathematical methods used in systems theory have been given detailed treatment Linear and dynamic programming have been used as models of optimal programming Since many practical tasks require the simulation models of water resource systems apart from their principles and a detailed description the simulation language for computing programming has been included Other methods of operations research and their application to water resource systems have been analysed and evaluated Some of these are models of inventory theory models of queuing theory graphs network analysis and some special methods like the out of kilter algorithm the chance constrained model and the chance constrained model combined with the simulation model One chapter is devoted to information and information systems in water management The final part of the book deals with prospects for water resource systems development The book is intended for engineers and decision makers involved in projects operation and research However it can be used by students in high schools technical universities and by graduate students It will serve as an up to date source of information about the principles and methodology of water resource analysis and design

Business Analytics for Decision Making Steven Orla Kimbrough, Hoong Chuin Lau, 2016-07-31 Business Analytics for Decision Making the first complete text suitable for use in introductory Business Analytics courses establishes a national syllabus for an emerging first course at an MBA or upper undergraduate level This timely text is mainly about model analytics particularly analytics for constrained optimization It uses implementations that allow students to explore models and data for the sake of discovery understanding and decision making Business analytics is about using data and models to solve various kinds of decision problems There are three aspects for those who want to make the most of their analytics encoding solution design and post solution analysis This textbook addresses all three Emphasizing the use of constrained optimization models for decision making the book concentrates on post solution analysis of models The text focuses on computationally challenging problems that commonly arise in business environments Unique among business analytics texts it emphasizes using heuristics for solving difficult optimization problems important in business practice by making best use of methods from Computer Science and Operations Research Furthermore case studies and examples illustrate the real world applications of these methods The authors supply examples in Excel GAMS MATLAB and OPL The

metaheuristics code is also made available at the book's website in a documented library of Python modules along with data and material for homework exercises. From the beginning the authors emphasize analytics and de-emphasize representation and encoding so students will have plenty to sink their teeth into regardless of their computer programming experience.

Operations Research and Decision Aid Methodologies in Traffic and Transportation Management Martine Labbe, Gilbert Laporte, Katalin Tanczos, Philippe Toint, 2013-06-29 Every one relies on some kind of transportation system nearly every day. Going to work, shopping, dropping children at school and many other cultural or social activities imply leaving home and using some form of transportation which we expect to be efficient and reliable. Of course efficiency and reliability do not occur by chance but require careful and often relatively complex planning by transportation system managers both in the public and private sectors. It has long been recognized that mathematics and more specifically operations research is an important tool of this planning process. However the range of skills required to cover both fields even partially is very large and the opportunities to gather people with this very diverse expertise are too few. The organization of the NATO Advanced Studies Institute on Operations Research and Decision Aid Methodologies in Traffic and Transportation Management in March 1997 in Balatonfured, Hungary was therefore more than welcome and the group of people that gathered for a very studious two weeks on the shores of the beautiful lake Balaton did really enjoy the truly multidisciplinary and high scientific level of the meeting. The purpose of the present volume is to report in a chronological order the various questions that were considered by the lecturers and the students at the institute. After a general introduction to the topic the first week focused on issues related to traffic modeling mostly in an urban context. QUANTITATIVE TECHNIQUES FOR DECISION MAKING GUPTA, M. P., KHANNA, R. B., 2011-02 This thoroughly revised and well received book now in its Fourth Edition continues to give an in-depth and incisive analysis of the various mathematical techniques required for managers in their decision making process. The book provides a clear understanding of the practical utility of mathematical modelling and techniques such as linear programming, integer programming, goal programming, dynamic programming, inventory models, decision theory, game theory, network analysis, queueing simulation and Markov analysis for solving real life problems. The book lays emphasis on the practical applications of the techniques rather than their rigorous mathematical treatment. It also discusses probability and probability distributions essential to tackling the everyday uncertainties of life. The book is primarily intended as a textbook for undergraduate and postgraduate students of management, postgraduate students of commerce, students of Master of Financial Control (MFC) course and undergraduate students of industrial and production engineering. In addition, practising managers will also find the book immensely helpful in their day to day decision making process. New to This Edition: A section describing the construction of activity on node (AON) networks for CPM and PERT networks has been included, considering that most software designed for network analysis plot networks in this format. An appendix on Mathematics for Managers which includes the topics of Matrix Algebra and Differential Calculus. New solved and unsolved problems. The book is
