

How to Calculate Density of Water

Method 1:

First Step (Data): It is important to read and understand the question so as to gather all the necessary information.

Method 2:

Second Step (Formula): In this stage, you state the equation that will help you to calculate the density of water, which is

$$\text{Density } (\rho) = \text{Mass } (m) / \text{Volume } (v) \text{ or } \rho = m/v..$$

Method 3:

Third Step (Solution): Now, you substitute your formula for density of water with the data available to you and solve the problem. Ensure to add the si unit to the final result which is in g/mL or gcm^{-3}

What is Density

Density is a fundamental property of matter that represents the amount of mass within a given volume. In simpler terms, it measures how tightly packed the particles are in a substance. The density of water, in particular, refers to the mass of water contained in a specific volume.
