Soils and Groundwater Pollution and Remediation P. M. Huang, I.K. Iskandar, 2020-07-26. The increasing population densities of Asia, Africa, and Oceania are in conflict with the ecosystem. A growing demand for food and fiber causes agriculture to rely heavily upon chemical fertilization, herbicides, and pesticides. Rising industrial output creates higher contamination from cadmium, lead, selenium, and other metals. *Soils and Groundwater Remediation* explores the toxic levels of metals, radionuclides, inorganics, and anthropogenic organic compounds found in the soils and groundwater of Asia, Africa, and Oceania. This 14-chapter book reviews the distribution, transformation, and dynamics of the pollutants. The authors also reflect on the impact of acid rain. The contributors to this book are well-known scientists from Japan, China, Korea, Malaysia, New Zealand, Australia, and Kenya. The authors address their findings to researchers, educators, government regulators, and students. As the title suggests, the book is ultimately concerned with remediation. Huang and Iskandar feel the potential for restoring ecosystem health in these areas is enormous. The contributions of *Soils and Groundwater Remediation* will bring science closer to achieving that possibility.

Groundwater Pollution in Africa Yongxin Xu, Brent Usher, 2006-10-05. In 2000, various UN organizations launched a collaborative effort to assess the vulnerability of groundwater in several African cities. The project addressed the issue of aquifer vulnerability and the protection of groundwater quality.
