RUSSELL'S FREGEAN SUBSTITUTIONAL THEORY. By GREGORY LANDINI.
New York: Oxford University Press, 1996. Pp. 32, 287.

In his 1903 *Principles of Mathematics* (PM), Russell holds that it is a characteristic of the terms of a proposition – that is, its “logical subjects” – “that any one of them may be replaced by any other entity without our ceasing to have a proposition” (1903, 40). Hence, in PM, Russell holds that, from the proposition ‘Socrates is human’, we can obtain the (false) propositions ‘Plato is human’ and ‘The class of humans is human’, replacing Socrates by the proper nouns of *humanity* and the class of humans, respectively. Hence also, in PM, Russell asserts the doctrine of the unrestricted variable: if we replace a logical subject of a proposition by a variable to yield a propositional function, the range of that variable includes absolutely every entity. For absolutely any entity can be taken as a value of that variable to yield a proposition, true or false. The doctrine of the unrestricted variable is thus incompatible with any epistheoretic metaphysics, according to which only entities of a certain restricted type can replace a logical subject of a given proposition so as to yield another proposition.

According to Gregory Landini, the doctrine of the unrestricted variable is not only the “fundamental doctrine” of PM (54); it is the “central doctrine” that dominated Russell’s thinking from PM to *Principles of Mathematics* (PM; see 3, 7). For Landini, Russell’s “allegiance to the doctrine never wavered” (43). The book is divided into three main parts: in the first, Landini discusses aspects of PM and “On Denotation” (OD), arguing that the unrestricted variable is central both to PM and to Russell’s rejection in OD of his earlier theory of denoting concepts; in the second, he explains the so-called “substitutional theory” that emerges in the period immediately after OD and develops it in some technical detail with the hope of promoting new theoretical research on it; in the third – the most original and controversial part of the book as regards the interpretation of Russell – he discusses the problems that arose for Russell on his substitutional theory and Russell’s attempts to resolve those problems in his 1903 “Les Paradoxes de la Logique” (PL), in his 1905 “Mathematical Philosophy Based on the Theory of Types” (ML), and finally in his and Whitehead’s 1910 PM.

In his original substitutional theory, Russell applies the notion of “incomplete symbol,” which he had recently introduced in OD, to expressions for propositional functions and classes: even though these expressions can occur in meaningful sentences, there really are no propositional functions or classes corresponding to them. While his substitutional theory avoids paradox by excluding these expressions from appearing in subject-positions in sentences, it does not involve endorsing a type-theoretic metaphysics or compromising the unrestricted variable. On his view, expressions for propositional functions and
