learning robotics and sensor integration Further it describes applications of computer science in sports such as alpine skiing badminton football rowing and table tennis as well as interesting applications areas of sport like dementia physiology training and space flights The appeals to informaticians interested in the application field of sports as well as for sports scientists and practitioners looking for advanced methods in their particular sport Automatic Documentation and Mathematical Linguistics ,2003 **Science Communication in South Africa** Weingart, Peter,Joubert, Marina,Facade, Bankole ,2020-01-18 Why do we need to communicate science Is science with its highly specialised language and its arcane methods too distant to be understood by the public Is it really possible for citizens to participate meaningfully in scientific research projects and debate Should scientists be mandated to engage with the public to facilitate better understanding of science How can they best communicate their special knowledge to be intelligible These and a plethora of related questions are being raised by researchers and politicians alike as they have become convinced that science and society need to draw nearer to one another Once the persuasion took hold that science should open up to the public and these questions were raised it became clear that coming up with satisfactory answers would be a complex challenge The inaccessibility of scientific language and methods due to ever increasing specialisation is at the base of its very success Thus translating specialised knowledge to become understandable interesting and relevant to various publics creates particular perils This is exacerbated by the ongoing disruption of the public discourse through the digitisation of communication platforms For example the availability of medical knowledge on the internet and the immense opportunities to inform oneself about health risks via social media are undermined by the manipulable nature of this technology that does not allow its users to distinguish between credible content and misinformation In countries around the world scientists policy makers and the public have high hopes for science communication that it may elevate its populations educationally that it may raise the level of sound decision making for people in their daily lives and that it may contribute to innovation and economic well being This collection of current reflections gives an insight into the issues that have to be addressed by research to reach these noble goals for South Africa and by South Africans in particular *Principles and Practice of Public Health Surveillance* Lisa M.
