Computing on Supercomputers J.T. Devreese, P.E. Van Camp, 2012-12-06 The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the University of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second workshop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computation Indeed during the past ten years computational science has become a third methodology with merits equal to the theoretical and experimental sciences Regretfully access to supercomputers remains limited for academic researchers None theless supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a decade ago It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS for the sponsoring of all the workshops These workshops are organized in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers which is also funded by the NFWO FNRS The other sponsor I want to thank is the University of Antwerp where the workshops took place The University of Antwerp UIA together with the NFWO FNRS are also the main sponsors of the ALPHA project which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection **Scientific Computing on Supercomputers** Matti Vauhkonen, Piet E. Karjalainen, 1990-12-17 This book comprises a large selection of papers presented at the second European Scientific Computing and Automation meeting SCA 90 Europe which was held in June 1990 in Maastricht The Netherlands The increasing use of computers for making measurements interpreting data and filing results brings a new unity to science SCA concentrates on common computer based tools which are useful in several disciplines Practical problems in laboratory automation robotics and information management with LIMS are covered in depth The process of designing and acquiring a LIMS is described and standards for data transfer between instruments between LIMS and instruments and between different LIMS are discussed The applications of statistics and expert systems are covered in several chapters Strategies for drug design are discussed with various practical examples Finally the display of scientific results as images and computer based animations is demonstrated by several examples with their color illustrations The book should be of interest to those managing R D projects doing research in laboratories acquiring or planning LIMS designing instruments and laboratory automation systems and those involved in data analysis of scientific results

Large-Scale Scientific Computing Svetozar Margenov, Jerzy Wasniewski, Plamen Yalamov, 2001-12-12 The purpose of the conference was to bring together scientists working with large computational problems in industry and specialists in the field of numerical analysis methods and the exploitation of modern high speed computers Some classes of methods appear again and again in the numerical treatment of problems from different fields of science and engineering The aim of this conference was to select some of these numerical methods and plan further experiments on several types of parallel computers The key lectures reviewed the most important numerical algorithms and scientific applications on parallel computers The invited speakers included university and practical engineers from industry as well as applied mathematicians numerical analysts and computer experts

Scientific Computing in Chemical Engineering II Frerich Keil, 1999-05-19 The application of modern methods in numerical mathematics on problems in chemical engineering is essential for designing analyzing and running chemical processes and even entire plants Scientific Computing in Chemical

Engineering II gives the state of the art from the point of view of numerical mathematicians as well as that of engineers. The present volume as part of a two volume edition covers topics such as computer aided process design combustion and flame image processing optimization control and neural networks. The volume is aimed at scientists practitioners and graduate students in chemical engineering industrial engineering and numerical mathematics.

Form and Function of Mammalian Lung: Analysis by Scientific Computing Andres Kriete, 2013-03-07 1 1 Overview The precise knowledge of the three dimensional 3 D assembly of biological structures is still in its origin. As an example a widely accepted concept and common belief of the structure of the airway network of lung is that of a regular dichotomous branching pattern also known as the trumpet model. This model first introduced by Weibel in 1963 is often used in clinical and physiological applications. However if this concept of dichotomy is used to model lung a shape is obtained that is quite different from a real lung. As a matter of fact many previous quantitative morphological and stereological investigations of lung did not concentrate on the spatial aspect of lung morphology but delivered data in a more statistical fashion. Accordingly the functional behavior predicted by such a model becomes questionable and indeed the morphometrically predicted lung capacity exceeds the physiological required capacity by a factor of 1.3 up to a factor of 2. This problem has also been termed a paradox as discussed by Weibel in 1983. In the rare cases where descriptive models of the mammalian bronchial tree exist monopodial in small mammals dichotomous in larger ones the understanding of the historical and or functional reasons for size related changes in the general design is not explainable. This investigation is trying to overcome this gap by computer modeling and functional simulation.

Applied Parallel Computing: Advanced Scientific Computing Juha Fagerholm, Juha Haataja, Jari Järvinen, Mikko Lyly, Peter Raback, Ville Savolainen, 2003-08-03 This book constitutes the refereed proceedings of the 6th International Conference on Applied Parallel Computing PARA 2002 held in Espoo Finland in June 2002. The 50 revised full papers presented together with nine keynote lectures were carefully reviewed and selected for inclusion in the proceedings. The papers are organized in topical sections on data mining and knowledge discovery parallel program development practical experience in parallel computing computer science numerical algorithms with hierarchical memory optimization numerical methods and algorithms cluster computing grid and network technologies and physics and applications.

Visualization in Scientific Computing Michel Grave, Yvon Le Lous, W. Terry Hewitt, 2012-12-06 Visualization in scientific computing is getting more and more attention from many people. Especially in relation with the fast increase of computing power graphic tools are required in many cases for interpreting and presenting the results of various simulations or for analyzing physical phenomena. The Eurographics Working Group on Visualization in Scientific Computing has therefore organized a first workshop at Electricite de France Clamart in cooperation with ONERA Chatillon. A wide range of papers were selected in order to cover most of the topics of interest for the members of the group for this first edition and 26 of them were presented in two days. Subsequently 18 papers were selected for this volume. The presentations were organized in eight small sessions.

in addition to discussions in small subgroups The first two sessions were dedicated to the specific needs for visualization in computational sciences the need for graphics support in large computing centres and high performance net works needs of research and education in universities and academic centres and the need for effective and efficient ways of integrating numerical computations or experimental data and graphics Three of those papers are in Part I of this book The third session discussed the importance and difficulties of using standards in visualization software and was related to the fourth session where some reference models and distributed graphics systems were discussed Part II has five papers from these sessions
