
SCIENTIFIC METHODS OF DETECTING DECEPTION

It is the method of gathering and knowing from the subject about the crime dispute or the question of issue employing the use of machine or device, drugs or substances and other accessory means. Most of the test are not reliable to be true and thus the information gathered are not admissible in court as evidence but only important to be used for further investigation.

1. Lie Detector Test- A test used to record the physiological changes associated with lying subject. The polygraph machine will record the blood pressure, respiratory rate and the skin resistance to electricity in a chart paper. Although the polygraph has been used extensively as an investigative aid in assisting law enforcement agencies in reducing the number of suspects in a particular offense and also used as pre-employment examination in business and industry, there are about 5 percent of the tests that are inconclusive because of the drawback. Some test showed positive results and yet the subject is innocent can other test gave negative result to guilty subject. In business and industry, the device is used to inquire deliberate falsification of application and other documents, illicit use of drugs, and thief of money or merchandized from the previous employers. In spite of the drawbacks and unreliable results that it may not admissible in court, modification s and improvement in the machine have been done. In some countries like in the United State, the result f the test as evidence is steadily moving towards the direction of admissibility in court, while the Philippines it still not admissible in court.

2. Administration of Truth Serum or Narco-analysis- This is a detecting deception method using narcotic or anesthetic drug in order to get information from the subject.

DRUG USED- (TRUTH SERUM)

| 3. Penthotal | 8. Scopolamine |
| 4. Seconal and other barbiturates | 9. Tricholorocthylene (Anesthetic drug) |

3. Hypnotism- This method was introduced by an Australian Physician Franz (Friedrich) Anton Mesmer (1734-1815) in 1778. He believed in animal magnetism, by which in his own personal electro- magnetism, Therapeutic effect influenced other persons. These effects produced were attributed to the state of mind of a subject whereby he is set up, and thereby instructed. to sit quietly and gazed at flashing light or shiny object tangled in front of his eyes and to cooperate with whatever the hypnotist like him to do.

Detected deception through hypnosis was not admissible in court due to the following.

1. In lacks the general scientific acceptance of the reliability of hypnosis in ascertaining the truth from falseness.
2. The possibility that the hypnotized subject will deliberately fabricate.
3. The prospect that the state of heightened suggestibility in which the hypnotized subjects is suspended will produce distortion of the fact rather than the truth.
4. The state of the mind and professionalism of the examiner are too subjective to permit admissibility of the expert testimony.

Unsettled (Updated and Expanded Edition) Steven E. Koonin,2024-06-11 In this updated and expanded edition of climate scientist Steven Koonin s groundbreaking book go behind the headlines to discover the latest eye opening data about climate change with unbiased facts and realistic steps for the future Greenland s ice loss is accelerating Extreme temperatures are causing more fatalities Rapid climate action is essential to avoid a future climate disaster You ve heard all this presented as fact But according to science all of these statements are profoundly misleading With the new edition of Unsettled Steven

Koonin draws on decades of experience including as a top science advisor to the Obama administration to clear away the fog and explain what science really says and doesn't say. With a new introduction this edition now features reflections on an additional three years of eye-opening data, alternatives to unrealistic net-zero solutions, global energy inequalities and the energy crisis arising from the war in Ukraine. When it comes to climate change the media, politicians and other prominent voices have declared that the science is settled. In reality the climate is changing but the why and how aren't as clear as you've probably been led to believe. Koonin takes readers behind the headlines, dispels popular myths and unveils little-known truths. Despite rising greenhouse gas emissions, global temperatures decreased from 1940 to 1970. Models currently used to predict the future do not accurately describe the climate of the past and modelers themselves strongly doubt their regional predictions. There is no compelling evidence that hurricanes are becoming more frequent or that predictions of rapid sea level rise have any validity. *Unsettled* is a reality check buoyed by hope, offering the truth about climate science, what we know, what we don't, and what it all means for our future. Fraud and Misconduct in Research Nachman Ben-Yehuda, Amalya Oliver-Lumerman, 2017-10-05 In *Fraud and Misconduct in Research* Nachman Ben-Yehuda and Amalya Oliver-Lumerman introduce the main characteristics of research misconduct, portray how the characteristics are distributed and identify the elements of the organizational context and the practice of scientific research which enable or deter misconduct. Of the nearly 750 known cases between 1880 and 2010 which the authors examine, the overwhelming majority took place in funded research projects and involved falsification and fabrication followed by misrepresentation and plagiarism. The incidents were often reported by the perpetrator's colleagues or collaborators. If the accusations were confirmed, the organization usually punished the offender with temporary exclusion from academic activities and institutions launched organizational reforms including new rules, the establishment of offices to deal with misconduct and the creation of re-training and education programs for academic staff. Ben-Yehuda and Oliver-Lumerman suggest ways in which efforts to expose and prevent misconduct can further change the work of scientists, universities and scientific research.
