Age and the Reach of Sociological Imagination

Dale Dannefer,2021-08-09 The dominant narratives of both science and popular culture typically define aging and human development as self contained individual matters failing to recognize the degree to which they are shaped by experiential and contextual contingencies Our understandings of age are thereby boxed in and constricted by assumptions of normality and naturalness that limit our capacities to explore possible alternative experiences of development and aging and the conditions both individual and social that might foster such experiences Combining foundational principles of critical social science with recent breakthroughs in research across

disciplines ranging from biology to economics this book offers a scientifically and humanly expanded landscape for apprehending the life course Rejecting familiar but false dichotomies such as nature vs nurture and structure vs agency it clarifies the organismic fundamentals that make the actual content of experience so centrally important in age and development and it also explores why attention to these fundamentals has been so resisted in studies of individuals and individual change and in policy and practice as well In presenting the basic principles and reviewing the current state of knowledge Dale Dannefer introduces multi levelled social processes that shape human development and aging over the life course and age as a cultural phenomenon organizing his approach around three key frontiers of inquiry that each invite a vigorous exercise of sociological imagination the Social Structural Frontier the Biosocial Frontier and the Critical Reflexive Frontier

This is an open access title available under the terms of a CC BY NC ND 4.0 International licence. It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations. How do we drive new knowledge and science? What are their present boundaries? And how can we improve science? We still do not understand these essential questions about science well even though science is at the foundation of modern society. The emerging field of the science of science can provide answers. The central challenge of the field is accounting for and integrating the different empirical and theoretical knowledge across disciplines into a holistic field and uncovering the general mechanism driving science. *Science of Science* is the first book to provide an integrated framework for the field and thus aims to provide a comprehensive understanding of the foundations and limits of science. The book integrates 14 scientific fields and illustrates how our evolved mind that enables us to observe, experiment and solve problems makes doing science possible but also shapes what and how we observe. Our scientific methods and instruments such as statistics and electron microscopes enable us to study a much larger range of phenomena but also puts constraints on how we measure them. Institutions and funding shape what knowledge we produce and how we evaluate our evidence among other influences. Here taking an interdisciplinary approach, Krauss explains how the sophisticated scientific tools we develop are the main driving force of creating new knowledge and advancing science. This methodological toolbox sets the scope and limits of what we can know and what is possible in science while economic, social and historical influences help shape what we study within that scope and those limits. The book provides a unifying theory for the field of science of science: the new methods drive science theory. By better understanding the foundations of science, we will also show how we can reduce the constraints and biases that we and our scientific methods and instruments face to advance science and push its present boundaries.

Women Scholars in Hong Kong Nian Ruan, 2024-01-02. This book depicts the diverse approaches of established women professors in perceiving and developing intellectual leadership in Hong Kong. It analyzes the combined influences of various disciplines, different higher education institutions and gender on the careers of female scholars in the East Asian region. The complexity and interaction of academic careers for women, disciplinary contexts, higher education systems and socio-cultural environments may present a relatively holistic landscape for readers interested in academic life and leadership. Scholars, administrators, managers and policymakers in higher education related fields may gain comprehensive ideas to facilitate faculty and institutional development through a cultural and sociological lens. This may empower female academics and students while also providing benefits for doctoral students and early career researchers seeking insights into the evolving advantages and disadvantages in women's academic careers. Audiences interested in gender issues may find it intriguing to compare women scholars with women in other professions and in different cultural contexts. **Current Catalog** National Library of Medicine (U.S.), First multi-year cumulation covers six years 1965-70 **Science, Technology and the**
