

The background of the entire image is a stylized, painterly illustration of an art gallery. On the left, a person in a dark coat stands with their back to the viewer, looking at a large artwork on the wall. This artwork depicts a glowing blue DNA double helix structure against a dark background. To the right of this, two more framed artworks are visible on the wall. The top one shows a classical-style face, and the bottom one shows a dark, abstract scene. The floor is a light, neutral color, and the walls are a warm, off-white tone. The overall lighting is soft, with a blueish tint in the upper and lower portions of the image.

Scientific Imagination The:

The Scientific Imagination Arnon Levy, Peter Godfrey-Smith, 2020 This book looks at the role of the imagination in science from both philosophical and psychological perspectives These contributions combine to provide a comprehensive and exciting picture of this under explored subject *Edgar Allan Poe, Eureka, and Scientific Imagination* David N. Stamos, 2017-02-28 Explores the science and creative process behind Poe's cosmological treatise In 1848 almost a year and a half before Edgar Allan Poe died at the age of forty his book *Eureka* was published In it he weaved together his scientific speculations about the universe with his own literary theory theology and philosophy of science Although Poe himself considered it to be his magnum opus *Eureka* has mostly been overlooked or underappreciated sometimes even to the point of being thought an elaborate hoax Remarkably however in *Eureka* Poe anticipated at least nine major theories and developments in twentieth century science including the Big Bang theory multiverse theory and the solution to Olbers paradox In this book the first devoted specifically to Poe's science side David N Stamos a philosopher of science combines scientific background with analysis of Poe's life and work to highlight the creative and scientific achievements of this text He examines Poe's literary theory theology and intellectual development and then compares Poe's understanding of science with that of scientists and philosophers from his own time to the present Next Stamos pieces together and clarifies Poe's theory of scientific imagination which he then attempts to update and defend by providing numerous case studies of eureka moments in modern science and by seeking insights from comparative biography and psychology cognitive science neuroscience and evolution Edgar Allan Poe *Eureka and Scientific Imagination* is the most comprehensive treatment of *Eureka* that has yet been published It is staggeringly thorough in its analysis of Poe's book but it also shows how Poe's theories of cosmogony and cosmology ramify into his fiction and poetry especially the tales of ratiocination Stamos takes *Eureka* seriously and he does so with the empirical undergirding of vast amounts of scientific scholarship and literary criticism James M Hutchisson author of *Poe The Scientific Imagination* Arnon Levy (Philosopher), Peter Godfrey-Smith, 2020 Science is both a creative endeavor and a highly regimented one It involves surprising sometimes unthinkably novel ideas along with meticulous exploration and the careful exclusion of alternatives At the heart of this productive tension stands a human capacity typically called the imagination our ability indeed our inclination to think up new ideas situations and scenarios and to explore their contents and consequences in the mind's eye This volume explores our capacity to imagine and its implications for the philosophy and practice of science One central aim is to integrate philosophical and psychological philosophical viewpoints and to assess central questions both empirically and theoretically Such questions include the roles of models metaphors and thought experiments the correct way to understand scientific fictions the development of imaginative capacities and the connection between the imagination and scientific practices such as abstraction idealization and counterfactual reasoning **The Scientific Imagination** Holton, 1999 **The Scientific Imagination in South Africa** William Beinart, Saul

Dubow,2021-05-20 South Africa provides a unique vantage point from which to examine the scientific imagination over the last three centuries when its position on the African continent made it a staging post for Portuguese Dutch and British colonialism In the eighteenth century South African plants and animals caught the imagination of visiting Europeans In the nineteenth century science became central to imperial conquest devastating wars agricultural intensification and the exploitation of rich mineral resources Scientific work both facilitated and offered alternatives to the imposition of segregation and apartheid in the twentieth century William Beinart and Saul Dubow offer an innovative exploration of science and technology in this complex divided society Bridging a range of disciplines from astronomy to zoology they demonstrate how scientific knowledge shaped South Africa's peculiar path to modernity In so doing they examine the work of remarkable individual scientists and institutions as well as the contributions of leading politicians from Jan Smuts to Thabo Mbeki
