Quality Control of Nuclear Medicine Instruments, 1984 Radiolabeled Monoclonal Antibodies for Imaging and Therapy Suresh C. Srivastava, 2013-03-14 The advent of hybridoma technology leading to the successful production of monoclonal antibodies against a variety of tumor associated antigens has during the last decade provided a very powerful tool for research and clinical investigations These highly specific reagents have essentially replaced the polysera of the earlier days The successful demonstration of the many wide ranging capabilities of the monoclonal antibody technique has already begun to exert an enormous impact on diverse areas of research in basic science and medicine In particular the potential of monoclonal antibodies to serve as carriers for selective targeting of radionuclides to tumors for diagnosis or therapy has stimulated an intense surge of research interest and even revived hopes of realizing Ehrlich's concept of the magic bullet Indeed the technology appears to be on the threshold of a revolution in diagnosing and treating malignant disease Much work remains to be done however and even though the progress has been impressive results to date have shown only moderate success There is no question that the limited success we have achieved thus far is merely a prelude to the many more exciting developments yet to come Expanding the Role of Medical Physics in Nuclear Medicine Donald G. Frey, Michael V. Yester, 1991 In recent years the field of nuclear medicine has been undergoing a renaissance The widespread application of SPECT imaging and slow diffusion of PET techniques have revitalised nuclear imaging At the same time rapid developments in radiopharmaceuticals have produced new imaging methods These developments are discussed here *Cardiac SPECT Imaging* E. Gordon DePuey, Ernest V.
