Towards an embodied science of intersubjectivity: Widening the scope of social understanding research Ezequiel Di Paolo,Hanne De Jaegher,2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people s intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of dis connection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory **The Routledge Handbook of Research Methods for**

The Site of the Social Theodore R. Schatzki, 2002-01-01 Inspired by Heidegger's concept of the clearing of being and by Wittgenstein's ideas on human practice Theodore Schatzki offers a novel approach to understanding the constitution and transformation of social life Key to the account he develops here is the context in which social life unfolds the site of the social as a contingent and constantly metamorphosing mesh of practices and material orders Schatzki's analysis reveals the advantages of this site ontology over the traditional individualist holistic and structuralist accounts that have dominated social theory since the mid nineteenth century A special feature of the book is its development of the theoretical argument by sustained reference to two historical examples the medicinal herb business of a Shaker village in the 1850s and contemporary day trading on the Nasdaq market First focusing on the relative simplicity of Shaker life to illuminate basic ontological characteristics of the social site Schatzki then uses the sharp contrast with the complex and dynamic practice of day trading to reveal what makes this approach useful as a general account of social existence Along the way he provides new insights into many major issues in social theory including the nature of social order the significance of agency the distinction between society and nature the forms of social change and how the social present affects its future

Social Inclusion and Mental Health Jed Boardman, Helen Killaspy, Gillian Mezey, 2022-12-08 People with mental health conditions are among the most socially excluded groups in society Mental health conditions are influenced by the social environment which in turn shapes our social and cultural responses to the people who experience them Much of what mental health practitioners do is essentially social and the effects of their interventions are hampered by the marginalised status of many of the people that they see This book documents the ways in which people with mental health conditions are excluded from participating in society and offers some pointers as to how this may be reversed It highlights the need to reduce mental health inequalities and to consider the importance of material inequalities and social injustices faced by people experiencing mental ill health Whilst the challenges are considerable and the solutions wide ranging mental health practitioners can play a significant role in facilitating the social inclusion of those with mental health conditions
