Kisailus, 1992-04-15 Glycoconjugates Composition Structure and Function provides an excellent overview of the composition biosynthesis function and structure of the carbohydrate chains of glycoconjugates from higher organisms It is recommended as a core reference text providing excellent coverage of the glycoconjugate field

Advances in Microbial Ecology K.C. Marshall, 2013-11-11 The publication of Volume 10 of *Advances in Microbial Ecology* represents something of a milestone in the history of modern microbial ecology *Advances in Microbial Ecology* was established by the International Committee on Microbial Ecology (ICOME) to provide a vehicle for in depth critical and even provocative reviews to emphasize current trends in the rapidly expanding field of microbial ecology Martin Alexander was the Founding Editor of the series and was responsible for editing the first five volumes The next five volumes were edited by Kevin Marshall *Advances in Microbial Ecology* has attained recognition as an authoritative source of information and inspiration for practicing and prospective microbial ecologists The Editorial Board usually invites contributions from leading microbial ecologists but also encourages individuals to submit outlines of unsolicited contributions to any member of the Board for consideration for publication in *Advances* Contributions to Volume 10 again cover a broad range of topics related to microbial ecology Interactions between microorganisms are well represented with chapters on bacterium virulent bacteriophage interactions by R E Lenski on fungal communities in the decay of wood by A D M Rayner and L Boddy on recognition in the nematode nematophagous fungus system by B Nordbring Hertz and on phagotrophic phytoflagellates by R W Sanders and K G Porter Chapters with both an ecological and a biogeochemical flavor include those on atmospheric CO and H₂ by R

Microbial Surface Components and Toxins in Relation to Pathogenesis Eliora Z. Ron, Shlomo Rottem, 2012-12-06 The meeting on Microbial Surface Components and Toxins in Relation to Pathogenesis was held on May 15 19 1989 in the Mitzpe Rachel guesthouse of Kibbutz Ramat Rachel in Israel Four major topics formed the basis for the meeting adhesion and colonization cell invasion and intracellular multiplication evasion of host defenses toxins and systemic effects The presentations clearly show that our understanding of the pathology pathogenesis and bacteria host cell interaction has greatly advanced over the last few years The contributions to

our knowledge on the biogenesis of adhesins and their molecular organization as well as on the mechanism of adherence to infected target tissue by pathogenic bacteria have been particularly impressive significant progress has been made in defining the nature of pathogenic and cytotoxic factors produced by bacteria and much has been learned about the biochemical and antigenic modifications occurring in diverse types of host cells upon infection The discussions of polysaccharide capsules bacterial endotoxins and secreted toxins illustrated the challenge and the possibilities for vaccine development

Schwarz, 1997-12-26 Surface Structures of Microorganisms and Their Interactions with the Mammalian Host Edited by E Schrinner M H Richmond G Seibert U Schwarz This book discusses the interactions that occur between the surface layers of microorganisms and the mammalian host Particular emphasis is placed on the field of microbial infection and pathogenicity whereby yeasts fungi and protozoa are considered in addition to bacteria Other topics treated include bacterial endotoxins and cell wall degradation products The twenty contributions to this book were written by a wide range of specialists from different countries They offer an international and interdisciplinary compilation of current knowledge in this field

Toward Anti-Adhesion Therapy for Microbial Diseases Itzhak Kahane, Itzhak

Ofek, 2012-12-06 The emergence of pathogens resistant to conventional antimicrobial agents has forced us to intensify the efforts in search for new approaches to prevent infectious diseases Such a direction was indicated in studies over the last two decades showing that adhesion of pathogens primarily via glycoconjugate or protein receptors of the host tissue is crucial for the infectious process Moreover it was found that infection can be prevented by blocking adhesion of the pathogen to mucosal surfaces of the host The various aspects of interference with the process of microbial adhesion as a way of preventing diseases were the subject of the Bat Sheva Seminar Towards Anti Adhesion Therapy of Microbial Infectious Diseases held in Zichron Yaakov Israel February 25 to March 1 1996 A major aim of the Bat Sheva de Rothschild Foundation for the Advancement of Science in Israel which sponsors a series of seminars ours among them is to provide the necessary tools and settings for international forums and exposure of young scientists and promising students to the state of the art of the field This goal has been achieved during the week's discussions and its major aspects are presented in this compendium The seminar's participants as well as the readers of this book thank the founder and Foundation for their support This book includes the major themes of this rapidly growing area However by no means do we intend to cover every bit and piece in it The book's first section deals with the lectin sugar interactions and their inhibitors
