Microsoft, Antitrust and the New Economy: Selected Essays David S. Evans, 2014-01-15 *Microsoft, Antitrust and the New Economy: Selected Essays* David S. Evans, Andrei Hagiu, Richard Schmalensee, 2008-02-15 Harnessing the power of software platforms what executives and entrepreneurs must know about how to use this technology to transform industries and how to develop the strategies that will create value and drive profits Software platforms are the invisible engines that have created touched or transformed nearly every major industry for the past quarter century They power everything from mobile phones and automobile navigation systems to search engines and web portals They have been the source of enormous value to consumers and helped some entrepreneurs build great fortunes And they are likely to drive change that will dwarf the business and technology revolution we have seen to this point *Invisible Engines* examines the business dynamics and strategies used by firms that recognize the transformative power unleashed by this new revolution a revolution that will change both new and old industries The authors argue that in order to understand the successes of software platforms we must first understand their role as a technological meeting ground where application developers and end users converge Apple Microsoft and Google for example charge developers little or nothing for using their platforms and make most of their money from end users Sony PlayStation and other game consoles by contrast subsidize users and make more money from developers who pay royalties for access to the code they need to write games More applications attract more users and more users attract more applications And more applications and more users lead to more profits *Invisible Engines* explores this story through the lens of the companies that have mastered this platform balancing act It offers detailed studies of the personal computer video game console personal digital assistant smart mobile phone and digital media software platform industries focusing on the business decisions made by

The Bigness Complex Walter Adams, James W. Brock, 1986 The Bigness Complex confronts head on the myth that organizational giantism leads to economic efficiency and well being in the modern age On the contrary it demonstrates how bigness undermines our economic productivity and progress endangers our democratic freedoms and exacerbates our economic problems and challenges This new edition has a thoroughly updated variety of issues examples and new developments including government bailouts of the airline industry regulation of biotechnology the fiasco of recent electricity deregulation and mergers and consolidations in oil radio and grocery retailing The analysis is framed in the timeless context of American distrust of concentrations of power The authors show how both the left and the right fail to address the central problem of power in formulating their diagnoses and recommendations The book concludes with an alternative public philosophy as a viable guidepost for public policy toward business in a free enterprise democracy

The Corporation and the Twentieth Century Richard N. Langlois, 2023-06-27 A definitive reframing of the economic institutional and intellectual history of the managerial era The twentieth century was the managerial century in the United States An organizational transformation from entrepreneurial to managerial capitalism brought forth what became a dominant narrative that administrative coordination by trained professional managers is essential to the efficient running of organizations both public and private And yet if managerialism was the apotheosis of administrative efficiency why did both its practice and the accompanying narrative lie in ruins by the end of the century In *The Corporation and the Twentieth Century* Richard Langlois offers an alternative version a comprehensive and nuanced reframing and reassessment of the economic institutional and intellectual history of the managerial era Langlois argues that managerialism rose to prominence not because of its inherent superiority but because of its contingent value in a young and rapidly developing American economy The structures of managerialism solidified their dominance only because the century's great catastrophes of war depression and war again superseded markets scrambled relative prices and weakened market supporting institutions By the end of the twentieth century Langlois writes these market supporting institutions had reemerged to shift advantage toward entrepreneurial and market driven modes of organization This magisterial new account of the rise and fall of managerialism holds significant implications for contemporary debates about industrial and antitrust policies and the role of the corporation in the twenty first century

Gilbert,2022-06-07 A proposal for moving from price centric to innovation centric competition policy reviewing theory and evidence on economic incentives for innovation Competition policy and antitrust enforcement have traditionally focused on prices rather than innovation Economic theory shows the ways that price competition benefits consumers and courts antitrust agencies and economists have developed tools for the quantitative evaluation of price impacts Antitrust law does not preclude interventions to encourage innovation but over time the interpretation of the laws has raised obstacles to enforcement policies for innovation In this book economist Richard Gilbert proposes a shift from price centric to innovation centric competition policy Antitrust enforcement should be concerned with protecting incentives for innovation and preserving opportunities for dynamic rather than static competition In a high technology economy Gilbert argues innovation matters Gilbert considers both theory and available empirical evidence on the relationships among market structure firm behavior and the production of new products and services He reviews the distinctive features of the high tech economy and why current analytical tools used by antitrust enforcers aren't up to the task of assessing innovation concerns He considers from the perspective of innovation competition Kenneth Arrow's replacement effect and the Schumpeterian theory of market power and appropriation discusses the effect of mergers on innovation and future price competition and reviews the empirical literature on competition mergers and innovation He describes examples of merger enforcement by US and European antitrust agencies examines cases brought against Microsoft and Google and discusses the risks and benefits of interoperability standards Finally he offers recommendations for competition policy The open access edition of this book was made possible by generous funding from Arcadia a charitable fund of Lisbet Rausing and Peter Baldwin

Entrepreneurship, Innovation, and Platforms Jeffrey Furman,Annabelle Gawer,Brian S. Silverman,Scott Stern,2017-09-29 Despite recent advances in our understanding of how innovation and entrepreneurship impact the creation and appropriation of value numerous questions remain unanswered This volume draws together scholars working at the forefront of entrepreneurship strategy and innovation related domains to explore these questions Exclusionary Abuse after the Post Danmark I case Anders Jessen,2017-07-01 Article 102 TFEU constitutes that a firm holding a dominant position in its market is not allowed to abuse this dominant market power through unilateral conduct Although this provision is clearly of great importance in curbing the adverse effects of market power it remains far from clear when dominant firms exclusionary conduct is in breach of this provision This book presents an in depth analysis of the limited case law soft law and theory in the field of law and economics on the matter confronting the complex issues raised by the effects based approach used to determine whether competition law has been breached and clarifying how this approach can best be

applied in future cases Among the issues and topics covered are the following relevant case law notably Post Danmark I Tomra and Intel analyses and discussions of when and how to apply the effect based approach including by object restrictions economic theories in the context of Article 102 TFEU and predation versus exclusion While the book is grounded in the legal framework it also applies a law and economics based approach with the aim of supporting the legal arguments and conclusions and thereby providing more robust arguments for the reached conclusions As the first study to offer a much needed clarification of the assessment relating to exclusionary conduct within Article 102 TFEU after the Post Danmark I case this book provides suggestions on how to structure the approach thus creating greater legal certainty for dominant firms and their competitors and providing a sound basis for both practice and research in this area It is sure to be read and studied widely by practitioners and academics concerned with the application of Article 102 TFEU

The Interface between Competition Law and Data Privacy Law Arletta Gorecka, 2024-10-24 This book assesses the extent to which the current EU competition law framework can incorporate privacy related theories of harm Specifically it evaluates the importance of protecting individual privacy in establishing exploitative abuse of dominance under Article 102 TFEU The book explores scenarios where Big Tech firms exploit their dominant positions through excessive data collection or limiting consumer choice thereby harming competition and directly affecting user well being It posits that zero priced business models of online platforms and the ubiquity of data generation create strong incentives to acquire and process consumer data which can harm digital consumers privacy The book assesses how the existing EU competition law framework can address and regulate exploitative abuses particularly concerning the protection of individuals privacy Importantly this book argues that competition law might recognize privacy related harms as forming exploitative theories of harm under Article 102 TFEU Article 102 TFEU offers flexibility and can be applied to a broader range of unfair practices Article 102 TFEU emphasizes enhanced transparency and predictability aiming to prevent abuses of dominant positions that could undermine healthy competition to the detriment of consumers and other market participants This book provides a comprehensive analysis of how the existing EU competition law framework can address the evolving challenges at the intersection of competition and privacy ultimately seeking to protect consumer welfare and ensure fair competition in the digital economy
