Essentials of Money, Banking and Financial Institutions, Samuel K. Andoh, 2014-10-15 The study of money banking and financial markets is a required or very popular

elective in most undergraduate and graduate programs in economics and finance in Africa. However, the textbooks used are those written primarily for the developed world such as the United States or the U.K. The result is that students graduate with excellent theoretical knowledge about the subject matter as it pertains to the developed economies but lack the ability to apply the same knowledge to less developed economies. Although the subject matter of money and banking can be treated at a theoretical level, it is best done with institutions in mind. As an application-oriented course, references and applications should, as much as possible, be to the conditions and institutions present in the environment where the subject is being studied and where the knowledge will be used rather than to institutions that exist elsewhere in developed economies. The primary purpose of *Essentials of Money Banking and Financial Institutions* is to provide a text in money banking and financial institutions in the context of the developing economies, especially Africa. Throughout the book, a deliberate effort will be made to focus the students' attention on the need to develop the existing institutions so they can help to accelerate economic development.

The Theory of Money and Financial Institutions Martin Shubik, 1999. This first volume in a three-volume exposition of Shubik's vision of mathematical institutional economics explores a one-period approach to economic exchange with money, debt, and bankruptcy. This is the first volume in a three-volume exposition of Martin Shubik's vision of mathematical institutional economics, a term he coined in 1959 to describe the theoretical underpinnings needed for the construction of an economic dynamics. The goal is to develop a process-oriented theory of money and financial institutions that reconciles micro and macroeconomics using as a prime tool the theory of games in strategic and extensive form. The approach involves a search for minimal financial institutions that appear as a logical technological and institutional necessity as part of the rules of the game. Money and financial institutions are assumed to be the basic elements of the network that transmits the sociopolitical imperatives to the economy. Volume 1 deals with a one-period approach to economic exchange with money, debt, and bankruptcy. Volume 2 explores the new economic features that arise when we consider multi-period, finite and infinite horizon economies. Volume 3 will consider the specific role of financial institutions and government and formulate the economic financial control problem linking micro and macroeconomics.
