**Application of Monoclonal Antibodies in Tumor Pathology** Dirk J. Ruiter, G.J. Fleuren, S.O. Warnaar, 2012-12-06 The development of monoclonal antibodies to human tumor associated antigens has greatly facilitated the application of immunohistochemical techniques to analyze surgically removed tissues During the last few years this approach has been utilized by a progressively increasing number of investigators to analyze malignant cells Although monoclonal antibodies to tumor associated antigens have not become yet routine reagents in immunopathology they have provided new information which could not be obtained with conventional antisera or histochemical procedures The following are representative examples Tumor associated antigens have been identified which display a restricted distribution in normal tissues and therefore may represent useful markers for radio imaging and appropriate targets for immunotherapy In spite of undetectable differences with conventional histopathological approaches heterogeneity has been found in the antigenic profile of tumor cells within a lesion in autologous lesions removed from different anatomic sites from a given patient and in lesions removed from different patients Phenotypes of tumor cells have been identified which correlate with the biology of tumor cells and with the clinical course of the disease From a practical view point the use of monoclonal antibodies in immunopathology has enhanced interactions between pathologists and immunologists as exemplified by the present book Such interactions have contributed to the application of basic research to clinical problems The chapter of this book discusses investigations performed with monoclonal

antibodies to antigens expressed by various types of normal and malignant human cells      **Molecular Methods in Plant Pathology** Uma. S. Singh, Rudra P. Singh, 2017-12-14 Molecular Methods in Plant Pathology covers methods in phytopathology at the molecular level including PCR techniques electron microscopy tissue culturing and the cloning of disease resistant genes Phytopathologists botanists horticulturists and anyone working in agriculture will find this a useful reference on biophysical biochemical biomolecular and biotechnological methods      Platelet Immunology C.
