Higgins, 1987-04-30 Most papers published in this volume are based on lectures presented at the Chico Conference on Semigroups held on the Chico campus of the California State University on April 10-12 1986. The conference was sponsored by the California State University Chico in cooperation with the Engineering Computer Sciences Department of the Pacific Gas and Electric Company. The program included seven 50 minute addresses and seventeen 30 minute lectures. Speakers were invited by the organizing committee consisting of S. M. Goberstein and P. M. Higgins. The purpose of the conference was to bring together some of the leading researchers in the area of semigroup theory for a discussion of major recent developments in the field. The algebraic theory of semigroups is growing so rapidly and new important results are being produced at such a rate that the need for another meeting was well justified. It was hoped that the conference would help to disseminate new results more rapidly among those working in semigroups and related areas and that the exchange of ideas would stimulate research in the subject even further. These hopes were realized beyond all expectations.

Monoids, Acts, and Categories M. Kil'p, Ulrich Knauer, Aleksandr Vasil'evich Mikhalev, 2000. The aim of the Expositions is to present new and important developments in pure and applied mathematics. Well established in the community over more than two decades the series offers a large library of mathematical works including several important classics. The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question. In addition they convey their relationships to other parts of mathematics. The series is addressed to advanced readers interested in a thorough study of the subject. Editorial Board: Lev Birbrair, Universidade Federal do Cear, Fortaleza, Brasil; Walter D. Semigroups, Algorithms, Automata, and Languages Gracinda M. S. Gomes, Jean Eric Pin, Pedro V. Silva, 2002. The thematic term on OC Semigroups, Algorithms, Automata and Languages (OCOL) organized at the International Centre of Mathematics, Coimbra, Portugal, in May/July 2001, was the gathering point for researchers working in the field of semigroups, algorithms, automata and languages. These areas were selected considering their huge recent developments, their potential applications and the motivation from other fields of mathematics and computer science. This proceedings volume is a unique collection of advanced courses and original contributions on semigroups and their connections with logic, automata, languages, group

Semigroups Pierre A. Grillet, 2017-11-22 This work offers concise coverage of the structure theory of semigroups It examines constructions and descriptions of semigroups and emphasizes finite commutative regular and inverse semigroups Many structure theorems on regular and commutative semigroups are introduced College or university bookstores may order five or more copies at a special student price which is available upon request from Marcel Dekker Inc

Lattices, Semigroups, and Universal Algebra Jorge Almeida, Gabriela Bordalo, Philip Dwinger, 2013-11-11 This volume contains papers which for the most part are based on talks given at an international conference on Lattices Semigroups and Universal Algebra that was held in Lisbon Portugal during the week of June 20 24 1988 The conference was dedicated to the memory of Professor Antonio Almeida Costa a Portuguese mathematician who greatly contributed to the development of the algebra in Portugal on the 10 anniversary of his death The themes of the conference reflect some of his research interests and those of his students The purpose of the conference was to gather leading experts in Lattices Semigroups and Universal Algebra and to promote a discussion of recent developments and trends in these areas All three fields have grown rapidly during the last few decades with varying degrees of interaction Lattice theory and Universal Algebra have historically evolved alongside with a large overlap between the groups of researchers in the two fields More recently techniques and ideas of these theories have been used extensively in the theory of semigroups Conversely some developments in that area may inspire further developments in Universal Algebra On the other hand techniques of semi group theory have naturally been employed in the study of semilattices Several papers in this volume elaborate on these interactions
