Nuclear Magnetic Resonance Spectroscopy of Boron Compounds Heinrich Nöth, Bernd Wrackmeyer, 2012-12-06 The revolutionary impetus of the NMR methods in organic chemistry has parallels in the field of boron chemistry IIB NMR spectroscopy provided a basis for the elucidation of structures and reactions of the boron hydrides However although many studies have been carried out with the higher boranes carboranes metalloboranes etc and although certain patterns have emerged the correlation between the observed chemical shift and the assigned structural unit is still not fully understood Therefore predictions in this area are still rather limited and semiquantitative interpretations are not yet possible Several years ago Eaton and Lipscomb summarized the status in this field in their book NMR Studies of Boron Hydrides and Related Compounds and a plethora of new data has accumulated since then The book also contained material on simple borane derivatives but they were not discussed in any detail On the other hand many systematic studies both synthetic and spectroscopic have been conducted on these simple boron materials in the last decade Thus a large amount of NMR information is available not only on IIB but also on ^1H ^{13}C and ^{14}N However this information is widely scattered in the literature and often the data are not discussed at all It seemed appropriate therefore to collect these data and to present them in one volume

Resonance Lawrence J. Berliner, 2012-12-06 We are pleased to present this second volume of a series that has already received much interest The application of magnetic resonance methods to the study of actual biological systems as contrasted to cell free samples although not entirely novel as demonstrated by Civan and Shporer in Volume I has taken on new dimensions with the use of phosphorus 31 and carbon 13 NMR in studying cells tissues and organelles The applications of 31 P NMR to such systems is reviewed in this volume while carbon 13 will be covered in a later one The use of nitroxide spin labels has grown to the point where it now may be considered a common biological technique The synthesis and applications of a new class of nitroxides is described in this volume ESR spectroscopy of paramagnetic ions is a powerful approach to studying molecular and structural details as the chapter by Boas Pilbrow and Smith on the ESR of copper in Volume 1 has shown In this volume the ESR of molybdenum and iron is treated in a comparable fashion In the first volume some aspects of 1 H NMR spectroscopy of certain classes of In this volume the high resolution biological macromolecules were discussed multinuclear NMR spectra of peptides including the physiologically significant peptide hormones are reviewed
