Physiology and biophysics of the circulation Alan Chadburn Burton,1966 **Physiology and Biophysics of the Circulation** Alan C. Burton,1968 **Physiology and Biophysics: Circulation, respiration, and fluid balance** William Henry Howell,1973 **Cardiovascular Physiology: Heart, Peripheral Circulation and Methodology** A. G. B. Kovách,E. Monos,G. Rubányi,2014-04-24 Advances in Physiological Sciences Volume 8 Cardiovascular Physiology Heart Peripheral Circulation and Methodology presents the proceedings of the 28th International Congress of Physiological Sciences held in Budapest Hungary on July 13 19 1980 This book examines some of the significant arterial pressure control mechanisms Organized into 43 chapters this compilation of papers begins with an overview of the origin of the notion of a vasomotor center controlling the arterial blood pressure This text then discusses the concept of long term arterial pressure regulation and some of the basic mechanisms of hypertension Other chapters consider the sites and mechanisms of capillary control This book discusses as well the performance of the heart during its excitation contraction cycle which is influenced by the movements of ions across the cell membrane The final chapter deals with the interpretation of in vivo NADH fluorescence measurements This book is a valuable resource for physiologists and clinicians **Biophysical Aspects of Cerebral Circulation** Yu. E. Moskalenko,G. B. Weinstein,I. T. Demchenko,2013-10-22 Biophysical Aspects of Cerebral Circulation provides a comprehensive review of the cerebral circulatory system This book consists of four chapters Chapter 1 is devoted to methodology attempts to explain the special features of a biophysical approach The biophysical principles of the most commonly used modern methods such as the clearance method and rheoencephalography are described in detail The second and third chapters examine all the biophysical aspects of the cerebral circulatory system as a functional unit and deal with some principles of its regulation The results of systems analysis using mathematical modeling are presented in broad outline Chapter 4 deals with processes related to the regional cerebral circulation Such investigations focus mainly on the relationship between periodically fluctuating factors affecting limited areas of brain tissue This text is beneficial to medical students and individuals researching on cerebral circulation **Physiology and Biophysics of the Circulation; an Introductory Text [by] Alan C. Burton** Alan Chadburn Burton,1966 *Biophysics of the Failing Heart* R. John Solaro,Jil C. Tardiff,2013-08-13 Subjects in the monograph Biophysics of the Failing Heart include state of the art chapters considering major biophysical mechanisms for why hearts responding to acquired or inherited stressors enter into maladaptive processes eventually leading to an inability of the heart to respond efficiently to hemodynamic loads especially during exercise The chapters describe biophysical techniques that have been applied to determine the triggers for the heart failure process as well as the mechanisms for sustaining the disorders These techniques include measurements of active and passive mechanical properties and hemodynamics at levels of organization ranging from molecules to hearts beating in situ

Biophysical concepts and approaches are also applied to determination of signaling and signal transduction energetics ionic currents transport processes electro chemical and chemo mechanical coupling By its emphasis on biophysical aspects of a prevalent clinical condition the monograph is unique in its perspective and focus The breadth of information in the chapters all in one place will be of value to clinicians and researchers at all levels Modern research approaches and clinical understanding of heart failure demands integration of multiple aspects of the disorders In most cases combinations of clinician scientists and researchers author the chapters A main benefit of the book is couched in its didactic approach together with its emphasis on how biophysical concepts and techniques aid in diagnosis and development of new therapies
