

A huge school of silversides attracts piscivores from far and wide

Piscivores

Even though prey and predators share reefs, it is uncommon to see a fish eat another fish. Barracudas and groupers seldom waste energy making random strikes in broad daylight. Their prey are too accomplished at surviving in a world of big mouths and sharp teeth for the hunters' conspicuous attacks to be effective. The grunts hovering together near to the reef instinctively understand, like all schooling fishes, that there is security in numbers. Their close parallel formation and bold stripes make it difficult for predators to single out targets. Every eye tracks the movement of passing piscivores; before a split-second

Right: Flatfish have evolved numerous defenses against piscivores.

Mitcheson, Patrick L. Colin, 2011-12-10 Reef fish spawning aggregations ranging from small groups to many tens of thousands of individuals are spectacular but poorly known natural phenomena whereby fish assemble at specific times and locations to spawn For some species these large groups may be the only form of reproduction the high fish numbers briefly giving a false impression of stability and abundance an illusion of plenty They are often a focus for intensive seasonal fishing because of their predictability and because many important commercial fishes form them Highly vulnerable to overexploitation many aggregations and their associated fisheries have disappeared or are in decline Few are effectively managed or incorporated

into protected areas Aggregations are not well understood by fishery scientists managers and conservationists and their significance little appreciated by fishers or the wider public To ensure their persistence to replenish important fisheries in coral ecosystems maintain their ecosystem function and continue to delight divers a significant change in perspective is needed to foster protection and management This book provides comprehensive and practical coverage of the biology study and management of reef fish aggregations exploring their how when where and why It explores ways to better protect study manage and conserve them while identifying key data gaps and questions The text is extensively illustrated with many unique never before published photographs and graphics Case studies on over 20 interesting and important fishes are included outlining their biology and fisheries and highlighting major concerns and challenges **Fishes** Alfredo Carvalho Filho,2023-08-02 This is the first large scale work that allows the identification of more than 1 000 species of coastal marine fish along the Brazilian coast from the Guianas to Argentina With the publication of Fishes of the Brazilian Coast Alfredo Carvalho Filho fills a fundamental gap in the knowledge of fish worldwide The author has participated in the Workshops for the Assessment of the State of Conservation of Marine Actinopterygii Species at the Chico Mendes Institute for Biodiversity Conservation and gives lectures on Communications Ichthyology and among these the one entitled Biology and Marketing with two disciplines so diverse gathered in a single presentation
