1. Summary of the Book

Kronfeld's book attacks the problem of *referring*: How do speakers reveal what entities they are talking about? How do they choose particular referring expressions in their utterances? These questions are asked from the perspective of a plan-based theory of speech acts and communication. Utterances are viewed as acts that are intended by speakers to have certain effects on the addressees, and on the world more generally. Utterances are therefore to be planned in broadly the same way as other types of acts are.

Kronfeld's embedding of referring in speech act theory rests partly on a Gricean formulation of the *literal goal* of a referring expression. The relationship of this goal to the looser notion of the *discourse purpose* of the expression is discussed. Another aspect of the speech act theme is the discussion of two ways in which a referring expression can be intended by a speaker to be *relevant*: functionally relevant or conversationally relevant. Functionally relevant expressions are used primarily to lead the addressee to identify an object. Conversationally relevant descriptions are those that are intended to focus the addressee on a specific aspect of an object. Such descriptions are related to a specific type of Gricean conversational implicature.

Kronfeld carefully draws a distinction between the problem of referring and the philosophical problem of *reference*. The latter problem is cast as the question, "How can thoughts (and sentences that articulate them) be *about* objects?" (p. 13). Kronfeld covers quite a lot of ground on the philosophical problem of reference, as the problem of referring is somewhat dependent on it. Kronfeld concentrates throughout on reference to physical objects, and on referring expressions that are noun phrases. Furthermore, almost all the book is about definite descriptions, names and other expressions that refer to *single*, specific, physical objects, rather than to indefinite objects, several objects, or sets of objects. Kronfeld also stresses that he is not directly concerned with the anaphoric linking of pronouns to other noun phrases. He is directly concerned only with links between noun phrases and the world.

In fact, much of the book is a defense of the *descriptive* approach to the philosophical problem of reference in thought and in language. In this approach, to refer to an object is essentially to have or invoke a mental representation of that object. The relationship between a sentence or thought and the objects it is about is that of denotation, which in turn is a function of descriptive content. The descriptive approach

Computational Theories of Interaction and Agency Philip Agre, Stanley J. Rosenschein, 1996. Over time the field of artificial intelligence has developed an agent perspective expanding its focus from thought to action, from search spaces to physical environments and from problem solving to long term activity. Originally published as a special double volume of the journal *Artificial Intelligence*, this book brings together fundamental work by the top researchers in artificial intelligence, neural networks, computer science, robotics and cognitive science on the themes of interaction and agency. It identifies recurring themes and outlines a methodology of the concept of agency. The seventeen contributions cover the construction of principled characterizations of interactions between agents and their environments as well as the use of these characterizations to guide analysis of existing agents and the synthesis of artificial agents. *Artificial Intelligence series Special Issues of Artificial Intelligence*. Possible Worlds Theory and Contemporary Narratology Alice Bell, Marie-Laure Ryan, 2019-01-01. The notion of possible worlds has played a decisive role in postclassical narratology by awakening interest in the nature of fictionality and in emphasizing the notion of world as a source of aesthetic experience in narrative texts. As a theory concerned with the opposition between the

actual world that we belong to and possible worlds created by the imagination possible worlds theory has made significant contributions to narratology Possible Worlds Theory and Contemporary Narratology updates the field of possible worlds theory and postclassical narratology by developing this theoretical framework further and applying it to a range of contemporary literary narratives This volume systematically outlines the theoretical underpinnings of the possible worlds approach provides updated methods for analyzing fictional narrative and profiles those methods via the analysis of a range of different texts including contemporary fiction digital fiction video games graphic novels historical narratives and dramatic texts Through the variety of its contributions including those by three originators of the subject area Lubomir Doležel Thomas Pavel and Marie Laure Ryan Possible Worlds Theory and Contemporary Narratology demonstrates the vitality and versatility of one of the most vibrant strands of contemporary narrative theory

Story Logic David Herman, 2004-01-01 Featuring a major synthesis and critique of interdisciplinary narrative theory Story Logic marks a watershed moment in the study of narrative David Herman argues that narrative is simultaneously a cognitive style a discourse genre and a resource for writing Because stories are strategies that help humans make sense of their world narratives not only have a logic but also are a logic in their own right providing an irreplaceable resource for structuring and comprehending experience Story Logic brings together and pointedly examines key concepts of narrative in literary criticism linguistics and cognitive science supplementing them with a battery of additional concepts that enable many different kinds of narratives to be analyzed and understood By thoroughly tracing and synthesizing the development of different strands of narrative theory and provocatively critiquing what narratives are and how they work Story Logic provides a powerful interpretive tool kit that broadens the applicability of narrative theory to more complex forms of stories however and wherever they appear Story Logic offers a fresh and incisive way to appreciate more fully the power and significance of narratives

Reference Kiyoshi Ishikawa,1998 **Computation and Human Experience** Philip Agre,1997-07-28 By paying close attention to the metaphors of artificial intelligence and their consequences for the field s patterns of success and failure this text argues for a reorientation of the field away from thought and toward activity It offers a critical reconstruction of AI research **Success in Referential Communication** M. Paul,2013-03-09 One of the most basic themes in the philosophy of language is referential uptake viz the question of what counts as properly understanding a referring act in communication In this inquiry the particular line pursued goes back to Strawson s work on re identification but the immediate influence is that of Gareth Evans It is argued that traditional and recent proposals fail to account for success in referential communication A novel account is developed resembling Evans account in combining an external success condition with a Fregean one But in contrast to Evans greater emphasis is placed on the action enabling side of communication Further topics discussed include the role of mental states in accounting for communication the impact of re identification on the understanding of referring acts and Donnellan s referential attributive distinction Readership Philosophers cognitive scientists and semanticists **Computational Linguistics** ,1995 *Computational Models of Referring* Kees Van Deemter,2016-05-06 An argument that computational models can shed light on referring a fundamental and much studied aspect of communication To communicate speakers need to make it clear what they are talking about The act of referring which anchors words to things is a fundamental aspect of language In this book Kees van Deemter shows that computational models of reference offer attractive tools for capturing the complexity of referring Indeed the models van Deemter presents cover many issues beyond the basic idea of referring to an object including reference to sets approximate descriptions descriptions produced under uncertainty concerning the hearer s knowledge and descriptions that aim to inform or influence the hearer The book which can be read as a case study in cognitive science draws on perspectives from across the cognitive sciences including philosophy experimental psychology formal logic and computer science Van Deemter advocates a combination of computational modeling and careful experimentation as the preferred method for expanding these insights He then shows this method in action covering a range of algorithms and a variety of methods for testing them He shows that the method allows us to model logically complicated referring expressions and demonstrates how we can gain an understanding of reference in situations where the speaker s knowledge is difficult to assess or where the referent resists exact definition

Finally he proposes a program of research that addresses the open questions that remain in this area arguing that this program can significantly enhance our understanding of human communication □□□□ □□,2006
