Refinement Calculus A Systematic Introduction:

Refinement Calculus Ralph-Johan Back, Joakim Wright, 1998-04-13 Much current research in computer science is concerned with two questions is a program correct And how can we improve a correct program preserving correctness This latter question is known as the refinement of programs and the purpose of this book is to consider these questions in a formal setting In fact correctness turns out to be a special case of refinement and so the focus is on refinement Although a reasonable background knowledge is assumed from mathematics and CS the book is a self contained introduction suitable for graduate students and researchers coming to this subject for the first time There are numerous exercises provided of varying degrees of challenge

Formal Methods for Components and Objects Frank S. de Boer, Marcello M. Bonsangue, Stefan Hallerstede, Michael Leuschel, 2010-11-11 All modern industries rely on large and complex software systems In order to construct such large systems in a systematic manner the focus of the development methodologies has switched in the last two decades from functional to structural issues Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design However their application to the development of large systems requires a greater emphasis on specification modeling and validation techniques supporting the concepts of reusability and modifiability and their implementation in new extensions of existing programming languages like Java This state of the art survey presents the outcome of the 8th Symposium on Formal Methods for Components and Objects held in Eindhoven The Netherlands in November 2009 The volume contains 17 revised contributions submitted after the symposium by speakers from each of the following European IST projects the IST FP6 project BIONETS on biologically inspired services evolution for the pervasive age the IST FP7 project COMPAS on compliance driven models languages and architectures for services the IST FP6 project CREDO on modelling and analysis of evolutionary structures for distributed services the IST FP7 DEPLOY on industrial deployment of advanced system engineering methods for high productivity and dependability the IST FP7 project HATS on highly adaptable and trustworthy software using formal methods the IST FP7 project INESS on integrated European railway signalling system the IST FP7 project MOGENTES on model based generation of tests for dependable embedded systems the IST FP6 project PROTEST on property based testing and the IST FP7 project QUASIMODO on quantitative system properties in model driven design of embedded systems

Interconnect-Centric Design for Advanced SOC and NOC Jari Nurmi, H. Tenhunen, J. Isoaho, Axel Jantsch, 2006-03-20 In Interconnect centric Design for Advanced SoC and NoC we have tried to create a comprehensive understanding about on chip interconnect characteristics design methodologies layered views on different abstraction levels and finally about applying the interconnect centric design in system on chip design Traditionally on chip communication design has been done using rather ad hoc and informal approaches that fail to meet some of the challenges posed by next generation SOC designs such as performance and throughput power and energy reliability predictability synchronization and management of concurrency To address these challenges it is critical to take a global view of the communication problem and decompose it along lines that make it more tractable We believe that a layered approach similar to that defined by the communication networks community should also be used for on chip communication design The design issues are handled on physical and circuit layer logic and architecture layer and from system design methodology and tools point of view Formal communication modeling and refinement is used to bridge the

communication layers and network centric modeling of multiprocessor on chip networks and socket based design will serve the development of platforms for SoC and NoC integration Interconnect centric Design for Advanced SoC and NoC is concluded by two application examples interconnect and memory organization in SoCs for advanced set top boxes and TV and a case study in NoC platform design for more generic applications *Integrated Formal Methods* Eerke Boiten, John Derrick, Graeme Smith, 2004-03-24 This book constitutes the refereed proceedings of the 4th International Conference on Integrated Formal Methods IFM 2004 held in Canterbury UK in April 2004 The 24 revised full papers presented together with 3 invited papers and one invited tutorial chapter were carefully reviewed and selected from 65 submissions The papers are devoted to automating program analysis state event based verification formalizing graphical notions refinement object orientation hybrid and timed automata integration frameworks verifying interactive systems and testing and assertions

A Practical Theory of Reactive Systems R. Kurki-Suonio, 2005-07-20 A man may imagine he understands something but still not understand anything in the way that he ought to Paul of Tarsus 1 Corinthians 8 2 Calling this a practical theory may require some explanation Theory and practice are often thought of as two different worlds governed by different ideals principles and laws David Lorge Parnas for instance who has contributed much to our theoretical understanding of software engineering and also to sound use of theory in the practice of it likes to point out that theoretically is synonymous to not really In applied mathematics the goal is to discover useful connections between these two worlds My thesis is that in software engineering this two world view is inadequate and a more intimate interplay is required between theory and practice That is both theoretical and practical components should be integrated into a practical theory It should be clear from the above that the intended readership of this book is not theoreticians They would probably have difficulties in appreciating a book on theory where the presentation does not proceed in a logical sequence from basic definitions to theorems and mathematical proofs followed by application examples In fact all this would not constitute what I understand by a practical theory in this context

Embedded Computer Systems: Architectures, Modeling, and Simulation Timo D. Härmäläinen, Andy D. Pimentel, Jarmo Takala, Stamatis Vassiliadis, 2005-07-11 The SAMOS workshop is an international gathering of highly qualified researchers from academia and industry sharing in a 3 day lively discussion on the quiet and spiring northern mountainside of the Mediterranean island of Samos As a tradition the workshop features workshop presentations in the morning while after lunch all kinds of informal discussions and nut cracking gatherings take place The workshop is unique in

the sense that not only solved research problems are presented and discussed but also partly unsolved problems and in depth topical reviews can be unleashed in the scientific arena Consequently the workshop provides the participants with an environment where collaboration rather than competition is fostered The earlier workshops SAMOS I IV 2001 2004 were composed only of invited presentations Due to increasing expressions of interest in the workshop the Program Committee of SAMOS V decided to open the workshop for all submissions As a result the SAMOS workshop gained an immediate popularity a total of 114 submitted papers were received for evaluation The papers came from 24 countries and regions Austria 1 Belgium 2 Brazil 5 Canada 4 China 12 Cyprus 2 Czech Republic 1 Finland 15 France 6 Germany 8 Greece 5 Hong Kong 2 India 2 Iran 1 Korea 24 The Netherlands 7 Pakistan 1 Poland 2 Spain 2 Sweden 2 Taiwan 1 Turkey 2 UK 2 and USA 5 We are grateful to all of the authors who submitted papers to the workshop
