Reflections On A Theory Of Organisms:

Reflections on a Theory of Organisms Walter M. Elsasser, 1987 **Reflections on a Theory of Organisms** Walter M. Elsasser, 1998-10-16 In a thought provoking and controversial work first published in 1987 eminent geophysicist Walter M. Elsasser argues that the behavior of living organisms cannot be reduced to physico chemical causality Suggesting that molecular biology today is at the same point as Newtonian physics on the eve of the quantum revolution Elsasser lays the foundation for a theoretical biology that points the way toward a natural philosophy of organic life *Biocivilisations* Predrag Slijepcevic, 2023-05-18 *Biocivilisations* is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads *Biocivilisations* is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepcevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future *Biocivilisations* is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth **Extreme Events in Nature and Society** Sergio Albeverio, Volker Jentsch, Holger Kantz, 2006-02-18 Significant and usually unwelcome surprises such as floods financial crisis epileptic seizures or material rupture are the topics of *Extreme Events in Nature and Society* The book authored by foremost experts in these fields reveals unifying and distinguishing features of extreme events including problems of understanding and modelling their origin spatial and temporal extension and potential impact The chapters converge towards the difficult problem of anticipation forecasting the event and proposing measures to moderate or prevent it *Extreme Events in Nature and Society* will interest not only specialists but also the general reader eager to learn how the multifaceted field of extreme events can be viewed as a coherent whole **God and Gravity** Philip Clayton, 2018-08-23 Philip Clayton is well known as a major thinker working at the interface of science philosophy and Christian theology Here for the first time a representative selection of his far reaching works have been brought together

into one place After a general introduction to the breadth of Clayton s writing the book is divided into six main sections 1 Science 2 Science Faith 3 Panentheistic Reflections on Science 4 Science 5 Science Spirit and 6 Progressive Theology This introduction and reader will become the go to text for all inquiries regarding Philip Clayton s expansive theology *Back To Darwin* John B. Cobb,2008-02-04 This book provides a distinctive radical way beyond the quarrels between evolutionary science and Christian belief Leading scientists philosophers and theologians critically discuss the metaphysical assumptions of neo Darwinism and offer concrete ways of broadening mainstream evolutionary theory Their open exchange moderated by veteran process theologian John B Cobb presents a holistic case for evolution that both theists and nontheists can accept Contributors Francisco J Ayala Ian G Barbour Charles Birch Philip Clayton John B Cobb Jr John Greene David Ray Griffin A Y Gunter John F Haught Lynn Margulis Reg Morrison Dorion Sagan Jeffrey Schloss Robert J Valenza Howard J Van Till

Functions: From Organisms to Artefacts Jean Gayon,Armand de Ricqlès,Antoine C. Dussault,2023-07-25 This book originally published in French examines the philosophical debates on functions over the last forty years and proposes new ways of analysis Pervasive throughout the life sciences the concept of function has the air of an epistemological scandal ascribing a function to a biological structure or process amounts to suggesting that it is explained by its effects This book confronts the debates on function with the use of the notion in a wide range of disciplines such as biology psychology and medicine It also raises the question of whether this notion which is as old in the history of technology as it is in the life sciences has the same meaning in these two domains The Oxford Handbook of English Prose 1500-1640 Andrew Hadfield,2013-07-04 The Oxford Handbook of English Prose 1500 1640 is the only available overview of early modern English prose writing It considers the range and variety of the substance and types of English prose and also analyses the forms and styles of writing adopted in the early modern period *Theological Reflections at the Boundaries* Paul O. Ingram,2011-11-04 The interdependence of boundary questions and the experience of cognitive dissonance reveal that knowledge in all fields of inquiry is always incomplete and tentative The issues are particularly acute for Christian theological reflection Ingram illustrates the importance of boundary questions and cognitive dissonance as a means of creatively transforming contemporary Christian theological reflection through dialogue with the natural sciences and the world s religions particularly Buddhism filtered through the lenses of Whiteheadian process philosophy **Kant's Theory of Biology** Ina Goy,Eric Watkins,2014-08-22 During the last twenty years Kant s theory of biology has increasingly attracted the attention of scholars and developed into a field which is growing rapidly in importance within Kant studies The volume presents fifteen interpretative essays written by experts working in the field covering topics from seventeenth and eighteenth century biological theories the development of the philosophy of biology in Kant s writings the theory of organisms in Kant s Critique of the Power of Judgment and current perspectives on the teleology of nature Organisms, Genes and Evolution Dieter Stefan Peters,Michael Weingarten,2000 Aus dem Inhalt Peter Janich Where does biology get its objects from Mathias

Automated Science Marta Bertolaso, Fabio Sterpetti, 2020-02-05 This book provides a critical reflection on automated science and addresses the question whether the computational tools we developed in last decades are changing the way we humans do science More concretely Can machines replace scientists in crucial aspects of scientific practice The contributors to this book re think and refine some of the main concepts by which science is understood drawing a fascinating picture of the developments we expect over the next decades of human machine co evolution The volume covers examples from various fields and areas such as molecular biology climate modeling clinical medicine and artificial intelligence The explosion of technological tools and drivers for scientific research calls for a renewed understanding of the human character of science This book aims precisely to contribute to such a renewed understanding of science **Unity and Disunity in Evolutionary**

Biology Richard G. Delisle, Maurizio Esposito, David Ceccarelli, 2024-09-02 It is not uncommon to see in major areas of research concerned with science that historical studies are accompanied by the rise of complementary or contradictory historiographies With time it seems scholars discover new approaches to study topics thus questioning old concepts traditions periodizations and historical labels Apparently this has not been the case in evolutionary thought In that area the main historiographic labels such as Darwinian Revolution Eclipse of Darwinism and Modern Synthesis have been in place and largely uncontested for about 50 years Such labels seem to work as irrefutable and often hidden premises of many historical reconstructions philosophical analyses and scientific conceptualizations This volume aims to move beyond this state of affair opening new thinking avenues by revisiting the traditional historiography and laying the groundwork for establishing a new

historiography that considers the intertwined threads that compose evolutionary biology. Notably evolutionary studies seem to have been marked by the tension between unification attempts and the proliferation of approaches, methodologies and styles of thinking. As the contributors to this volume illustrate, research traditions branched off throughout the history of evolutionary thought before and after Charles Darwin. The resulting complexity challenges traditional thinking categories, throwing a somewhat different light on a more recent label like the Extended Evolutionary Synthesis. More than 40 years after the now classic *The Evolutionary Synthesis: Perspectives on the Unification of Biology* 1980 edited by Ernst Mayr and William Provine, the contributors to this volume aim to reevaluate where evolutionary biology stands today.

State medicine a menace to democracy Harry Bernhardt Anderson, 1920 **Semiotica**, 1999 **Nietzsche's Culture of Humanity** Jeffrey Church, 2015-09-11. This book argues that Nietzsche is a meritocratic thinker, not as many have argued an aristocrat or a democrat.

Phenomenological Method: Theory and Practice F. Kersten, 2012-12-06. This book has two parts. The first part is chiefly concerned with critically establishing the universally necessary order of the various steps of the transcendental phenomenological method; the second part provides specific cases of phenomenological analysis that illustrate and test the method established in the first part. More than this, and perhaps even more important in the long run, the phenomenological analyses reported in the second part purport a foundation for drawing phenomenological philosophical conclusions about problems of space perception, other minds and time perception. The non-analytical, that is the literary sources of this book are many. Principal among them are the writings of Husserl, which will be accorded a special methodological function, as well as the writings of his students of the Göttingen and Freiburg years. Of the latter, especially important are the writings and when memory serves the lectures of Dorion Cairns and Aron Gurwitsch. Of the former, especially significant are the writings of Heinrich Hofmann, Wilhelm Schapp and Hedwig Collingwood.

Evolution and Transitions in Complexity Gerard A.J.M. Jagers op Akkerhuis, 2016-10-18. This book discusses several recent theoretic advancements in interdisciplinary and transdisciplinary integration in the field of evolution. While exploring novel views, the text maintains a close link with one of the most broadly held views on evolution, namely that of Darwinian evolution. This work puts forth a new point of view which allows researchers to define in detail the concept of evolution. To create this conceptual definition, the text applies a stringent object-based focus. With this focus, the editor has been able to develop an object-based pattern of evolution at the smallest scale. Subsequently, this smallest scale pattern is used as an innovative basis for generalizations. These generalizations create links between biological Darwinism and generalized Darwinism. The object-based approach that was used to suggest innovations in the field of Darwinian evolution also allowed for contributions to other topics such as major evolutionary transitions, theory of life and the relationships between evolution, self-organization and thermodynamics. Together, the chapters of this book and the multidisciplinary reflections and comments of various specialists on these chapters offer an exciting palette of innovative ideas.

The Art Theory of Wassily Kandinsky, 1909-1928 Christopher

Short, 2010 Kandinsky's theory of art has usually been treated as little more than a guide to help our understanding of his paintings. In contrast, this book attends primarily to the artist's writings on art; thus his art theory is treated on its own terms. Drawing on the diverse literature that has been written on Kandinsky's art and theory, the author demonstrates that while many different perspectives on his work have been identified, none holds the key to that work. Instead, the book shows Kandinsky's method in his writings to be highly eclectic, resulting in an exciting and challenging variety of content. A description that also applies as a postscript to the book shows his method in painting. Kandinsky, however, transcended this diversity and consistently sought evidence of the unity of all things, something that would be realised through his understanding of the term synthesis. The book follows Kandinsky's fascinating attempts to establish synthesis not only in art but also in other disciplines including science, mathematics, law, and politics in his key theoretical publications: *On the Spiritual in Art* (1911) and *Point and Line to Plane* (1926). The result is a new and innovative understanding of both Kandinsky's art theory and his art.
