Glaser,2009-11-01 Most Americans consider electricity essential to their lives but the historic disparity of its distribution and use challenges notions of a democratic lifestyle economy and culture By the beginning of the twentieth century substations wires towers and poles had followed migrants westward as the industrial era s most prominent symbols of progress and power When private companies controlled power production electrical transmission and distribution without regulation they argued that it was not economically feasible for many ethnic and rural communities to access the grid Yet government agents continued to advocate electrical living through federal programs that reached into and across farming communities and American Indian reservations to homogenize and assimilate them through urban technologies In the end however rural electrification was a locally directed process subject to local and regional issues concerns and parameters *Electrifying the Rural American West* provides a social and cultural history of rural electrification in the West Using three case studies in Arizona Leah S Glaser details how when examined from the local level the process of electrification illustrates the impact of technology on places economies and lifestyles in the diverse communities and landscapes of the American West As today s policy makers advocate building more power lines as a tool to bring democracy to faraway places and smart grids to deliver renewable energy they would do well to review the historical relationship of Americans with electronic power production distribution and regulation **50 Cities of the U.S.A.** Gabrielle
