Set Model For Database And Information Systems

Mark Levene, George Loizou

Set Model For Database And Information Systems:

The Set Model for Database and Information Systems M. M. Gilula, 1994 An innovative even radical approach to database modeling which could prove to be as seminal as Codd's work on the relational model Russian computer scientists have been hampered by old slow systems and by a lack of memory and storage capacity the result as demonstrated here is unconventional thinking that maximizes resources and produces elegant compact programs

New Trends in Databases and Information Systems Mārīte Kirikova, Kjetil Nørnvåg, George A. Papadopoulos, Johann Gamper, Robert Wrembel, Jérôme Darmont, Stefano Rizzi, 2017-09-08 This book constitutes the thoroughly refereed short papers workshops and doctoral consortium papers of the 21th European Conference on Advances in Databases and Information Systems ADBIS 2017 held in Nicosia Cyprus in September 2017 The 25 full and 4 short workshop papers and the 12 short papers of the main conference were carefully reviewed and selected from 160 submissions The papers from the following workshops have been included in the proceedings the first workshop on Data Driven Approaches for Analyzing and Managing Scholarly Data AMSD 2017 the first workshop on Novel Techniques for Integrating Big Data BigNovelTI 2017 the first international workshop on Data Science Methodologies and Use Cases DaS 2017 the second international workshop on Semantic Web for Cultural Heritage SW4CH 2017

Advances on Databases and Information Systems Tadeusz Morzy, Theo Haerder, Robert Wrembel, 2012-09-13 This book constitutes the thoroughly refereed proceedings of the 16th East European Conference on Advances in Databases and Information Systems ADBIS 2012 held in Poznan Poland in September 2012 The 32 revised full papers presented were carefully selected and reviewed from 122 submissions The papers cover a wide spectrum of issues concerning the area of database and information systems including database theory database architectures query languages query processing and optimization design methods data integration view selection nearest neighbor searching analytical query processing indexing and caching concurrency control distributed systems data mining data streams ontology engineering social networks multi agent systems business process modeling knowledge management and application oriented topics like RFID XML and data on the Web

Logics for Databases and Information Systems Jan Chomicki, Gunter Saake, 2012-12-06 Time is ubiquitous in information systems Almost every enterprise faces the problem of its data becoming out of date However such data is often valuable so it should be archived and some means to access it should be provided Also some data may be inherently historical e.g. medical cadastral or judicial records Temporal databases provide a uniform and systematic way of dealing with historical data Many languages have been proposed for temporal databases among others temporal logic Temporal logic combines abstract formal semantics with the amenability to efficient implementation This chapter shows how temporal logic can be used in temporal database applications Rather than presenting new results we report on recent developments and survey the field in a systematic way using a unified formal framework GHR94 Ch094 The handbook GHR94 is a comprehensive reference on mathematical foundations of temporal logic In this chapter we study

how temporal logic is used as a query and integrity constraint language Consequently model theoretic notions particularly for formula satisfaction are of primary interest Axiomatic systems and proof methods for temporal logic GHR94 have found so far relatively few applications in the context of information systems Moreover one needs to bear in mind that for the standard linearly ordered time domains temporal logic is not recursively axiomatizable GHR94 so recursive axiomatizations are by necessity incomplete

Databases, Information Systems, and Peer-to-Peer Computing Karl Aberer, Manolis Koubarakis, Vana Kalogeraki, 2004-01-28 This book constitutes the thoroughly refereed post proceedings of the First International Workshop on Databases Information Systems and Peer to Peer Computing DBISP2P 2003 held in Berlin Germany in September 2003 as a satellite event of VLDB 2003 The 16 revised full papers presented together with the abstract of an invited contribution were carefully selected during two rounds of reviewing and improvement The papers are organized in topical sections on structure in P2P networks semantics and data integration data streams and publish subscribe and data structures and query processing

A Guided Tour of Relational Databases and Beyond Mark Levene, George Loizou, 2012-09-18 Database theory is now in a mature state and this book addresses important extensions of the relational database model such as deductive temporal and object oriented databases It provides an overview of database modelling with the Entity Relationship ER model and the relational model providing the pivot on which the material revolves The main body of the book focuses on the primary achievements of relational database theory including query languages integrity constraints database design computable queries and concurrency control The most important extensions of the relational model are covered in separate chapters This book will be useful to third year computer science undergraduates and postgraduates studying database theory and will also be of interest to researchers and database practitioners who would like to know more about the ideas underlying relational database management systems and the problems that confront database researchers

Advances in Databases and Information Systems András Benczúr, Bernhard Thalheim, Tomáš Horváth, 2018-07-28 This book constitutes the proceedings of the 22nd European Conference on Advances in Databases and Information Systems ADBIS 2018 held in Budapest Hungary in September 2018 The 17 regular papers presented together with two invited papers were carefully selected and reviewed from numerous submissions The papers are organized in topical sections such as information extraction and integration data mining and knowledge discovery indexing query processing and optimization data quality and data cleansing distributed data platforms including cloud data systems key value stores and big data systems and streaming data analysis web XML and semi structured databases

Databases, Information Systems, and Peer-to-Peer Computing Gianluca Moro, Sonia Bergamaschi, Sam Joseph, Jean-Henry Morin, Aris M. Fuzzy Sets in

Approximate Reasoning and Information Systems J.C. Bezdek,Didier Dubois,Henri Prade,2012-12-06 Approximate reasoning is a key motivation in fuzzy sets and possibility theory This volume provides a coherent view of this field and its impact on database research and information retrieval First the semantic foundations of approximate reasoning are presented Special emphasis is given to the representation of fuzzy rules and specialized types of approximate reasoning Then syntactic aspects of approximate reasoning are surveyed and the algebraic underpinnings of fuzzy consequence relations are presented and explained The second part of the book is devoted to inductive and neuro fuzzy methods for learning fuzzy rules It also contains new material on the application of possibility theory to data fusion The last part of the book surveys the growing literature on fuzzy information systems Each chapter contains extensive bibliographical material Fuzzy Sets in Approximate Reasoning and Information Systems is a major source of information for research scholars and graduate students in computer science and artificial intelligence interested in human information processing *Fuzzy Databases* Frederick E. Petry,2012-12-06 This volume presents the results of approximately 15 years of work from researchers around the world on the use of fuzzy set theory to represent imprecision in databases The maturity of the research in the discipline and the recent developments in commercial industrial fuzzy databases provided an opportunity to produce this survey In this introduction we will describe briefly how fuzzy databases fit into the overall design of database systems and then overview the organization of the text FUZZY DATABASE LANDSCAPE The last five years have been witness to a revolution in the database research community The dominant data models have changed and the consensus on what constitutes worthwhile research is in flux Also at this time it is possible to gain a perspective on what has been accomplished in the area of fuzzy databases Therefore now is an opportune time to take stock of the past and establish a framework A framework should assist in evaluating future research through a better understanding of the different aspects of imprecision that a database can model
