Six in a Bed Roanne van Voorst, 2024-04-02. Love is the most important and intense experience of our life. It pushes us to elation to heartbreak to sing for joy and sob in disappointment. Connecting in this way to others is an essential quality of being human. Without love we don't learn and develop properly as children and we don't flourish as adults. In short we're starved of what we need. But love is on the verge of monumental change. Sex robots are already on the market. Polyamory is gaining ground. Drugs are being developed that can make you fall in love. And AI and robotics are set to revolutionize how we relate to each other. Debates about whether more than two people should be able legally to get married are heating up at the same time an increasing number of people have decided to stay single and who go by the name of sologamists. The future's anthropologist Roanne van Voorst spent three years researching love's fluid landscape and immersing herself in today's latest trends to gain insight into the human of tomorrow. She cultivated a virtual friendship hired a rentable friend and an erotic masseuse shared a bed with sex dolls and flirted with artificial intelligence. She dated and danced in a virtual world spoke to polyamorists sologamists sex workers pansexuals asexuals heterosexuals homosexuals men women and people who don't accept the binary gender label. She wanted to know how changes to love are changing our species. This book is her brilliantly engaging answer. *Feminist Philosophy of Technology* Janina Loh, Mark Coeckelbergh, 2019-12-31. There has been little attention to feminism and gender issues in mainstream philosophy of technology and vice versa. Since the beginning of the so-called second wave feminism in the middle of the 20th century there has been a growing awareness of the urgency of a critical reflection of technology and science within feminist discourse. But feminist thinkers have not consistently interpreted technology and science as emancipative and liberating for the feminist movement. Because technological development is mostly embedded in social political and economic systems that are patriarchally hierarchized many feminists criticized the structures of dominance marginalization and oppression inherent in numerous technologies.

Therefore the question of defining and ascribing responsibility in technics and science is essential for this anthology regarding for instance the technological transformation of labor the life in the information society and the relationship between humans and machines
