Sex Inequalities In Urban Employment In The Third World:

Sex Inequalities in Urban Employment in the Third World Richard Anker, Catherine Hein, 1986-11-10 Extrait du revers de couverture Great inequality exists between men and women with respect to occupations career paths and earnings This volume presents an overview of the current situation on developing countries along with results from ILO UNFPA Insights are provided into the disadvantages women on the Third World face in the employment market based on this unique set of interviews with several thousand employers male employees and female employees which reveal why factors such as recruitment wages promotion absenteeism and turnover differ by sex of worker *Women in the Third World* Lynne

Brydon, 1989 *Women in the Third World* provides an up to date general account and review of research on the roles and status of women in contemporary Third World societies The book focuses on four major themes of underdevelopment which have particular relevance for gender roles and relations the household production reproduction and policy These issues are illustrated with material from rural and urban areas in all parts of the Third World The book summarizes significant ideas and findings Lynne Brydon and Sylvia Chang have avoided a narrow focus on particular regions and countries to provide a synoptic overview In addition to being a valuable source of reference for scholars interested in gender and development in the Third World the book also attempts to pinpoint fundamental aspects of gender inequality which apply to women everywhere The overriding conclusion of the book is that women's experiences of development are generally negative and that intervention is urgently required to prevent their positions relative to men's deteriorating still further

Momsen, 2008-02-21 For all societies the common denominator of gender is female subordination For women of the Third World the effects of this position are worsened by economic crisis the legacy of colonialism as well as patriarchal attitudes and economic crises Feminist critique has introduced the gender factor to development theory arguing that the equal distribution of the benefits of economic development can only be achieved through a radical restructuring of the process of development This important new book reviews both policy and practice in Latin America Africa and Asia and raises thought provoking questions concerning the role of development planning and the empowerment of women *Women's Work And Child Welfare In The Third World* Joanne Leslie, 2021-11-18 Recent trends in women's work and child survival and development in developing countries raise concerns about the relationship between these two key elements of development

This paper reviews and analyzes the methodology and findings of 50 studies of both women's work and infant feeding practices and women's work and child nutritional status. Although the pattern of findings is complex and occasionally contradictory, the paper concludes that overall there is little evidence of a negative effect of maternal employment on child nutrition and therefore no justification for limiting women's labor force participation on the grounds of promoting child welfare.

Reversed Realities Naila Kabeer, 1994-07-17 A dynamic reassessment of development theory with a focus on gender, this book examines alternative frameworks for analyzing gender hierarchies, identifies the household as the primary site for the construction of power relations, assesses the inadequacy of the poverty line as a measuring tool and provides a critical overview of population control.

Gender, Identity and Place Linda McDowell, 2018-03-23 Feminist approaches within the social sciences have expanded enormously since the 1960s. In addition, in recent years geographic perspectives have become increasingly significant as feminist recognition of the differences between women, their diverse experiences in different parts of the world, and the importance of location in the social construction of knowledge has placed varied geographies at the centre of contemporary feminist and postmodern debates. *Gender, Identity and Place* is an accessible and clearly written introduction to the wide field of issues that have been addressed by geographers and feminist scholars. It combines the careful definition and discussion of key concepts and theoretical approaches with a wealth of empirical detail from a wide-ranging selection of case studies and other empirical research. It is organized on the basis of spatial scale, examining the relationships between gender and place from the body to the nation, although the links between different spatial scales are also emphasized. The conceptual division and spatial separation between the public and private spheres and their association with men and women respectively has been a crucial part of the social construction of gendered differences, and its establishment, maintenance and reshaping from industrial urbanization to the end of the millennium is a central linking theme in the eight substantive chapters. The book concludes with an assessment of the possibilities of doing feminist research. It will be essential reading for students in geography, feminist theory, women's studies, anthropology and sociology.
