Microelectronic Interconnections and Assembly G.G. Harman,Pavel Mach,2012-12-06 MICROELECTRONIC INTERCONNECTIONS AND MICROASSEMBLY WORKSHOP 18 21 May 1996 Prague Czech Republic Conference Organizers George Harman NIST USA and Pavel Mach Czech Republic Summary of the Technical Program Thirty two presentations were given in eight technical sessions at the Workshop A list of these sessions and their chairpersons is attached below The Workshop was devoted to the technical aspects of advanced interconnections and microassembly but also included papers on the education issues required to prepare students to work in these areas In addition to new technical developments several papers presented overviews predicting the future directions of these technologies The basic issue is that electronic systems will continue to be miniaturized and at the same time performance must continue to improve Various industry roadmaps were discussed as well as new smaller packaging and interconnection concepts The newest chip packages are often based on the selection of an appropriate interconnection method An example is the chip scale package which has horizontal x y dimensions 20% larger than the actual silicon chip itself The chip is often flip chip connected to a micro ball grid array but direct chip attach was described also Several papers described advances in the manufacture of such packages

Microelectronics Packaging Handbook Rao Tummala,Eugene J. Rymaszewski,Alan G. Klopfenstein,1997-01-31 This thoroughly revised and updated three volume set continues to be the standard reference in the field providing the latest in microelectronics design methods modeling tools simulation techniques and manufacturing procedures Unlike reference books that focus only on a few aspects of microelectronics packaging these outstanding volumes discuss state of the art packages that meet the power cooling protection and interconnection requirements of increasingly dense and fast microcircuitry Providing an excellent balance of theory and practical applications this dynamic compilation features step by step examples and vital technical data simplifying each phase of package design and production In addition the volumes contain over 2000 references 900 figures and 250 tables Part I Technology Drivers covers the driving force of microelectronics packaging electrical thermal and reliability It introduces the technology developer to aspects of manufacturing that must be considered during product development Part II Semiconductor Packaging discusses the interconnection of the IC chip to the first level of packaging and all first level packages Electrical test sealing and encapsulation technologies are also covered in detail Part III Subsystem Packaging explores board level packaging as well as connectors cables and optical packaging

Microelectronics Packaging Handbook R.R. Tummala,Eugene J. Rymaszewski,Alan G. Klopfenstein,2013-11-27 Electronics has become the largest industry surpassing agriculture auto and heavy metal industries It has become the industry of choice for a country to prosper already having given rise to the phenomenal prosperity of Japan Korea Singapore Hong Kong and Ireland among others At the current growth rate total worldwide semiconductor sales will reach 300B by the year 2000 The key electronic technologies responsible for the growth

of the industry include semiconductors the packaging of semiconductors for systems use in auto telecom computer consumer aerospace and medical industries displays magnetic and optical storage as well as software and system technologies There has been a paradigm shift however in these technologies from mainframe and supercomputer applications at any cost to consumer applications at approximately one tenth the cost and size Personal computers are a good example going from 500IMIP when products were first introduced in 1981 to a projected IIMIP within 10 years Thin light portable user friendly and very low cost are therefore the attributes of tomorrow s computing and communications systems Electronic packaging is defined as interconnection powering cool ing and protecting semiconductor chips for reliable systems It is a key enabling technology achieving the requirements for reducing the size and cost at the system and product level **Area Array**

Interconnection Handbook Karl J. Puttlitz,Paul A. Totta,2012-12-06 Microelectronic packaging has been recognized as an important enabler for the solid state revolution in electronics which we have witnessed in the last third of the twentieth century Packaging has provided the necessary external wiring and interconnection capability for transistors and integrated circuits while they have gone through their own spectacular revolution from discrete device to gigascale integration At IBM we are proud to have created the initial simple concept of flip chip with solder bump connections at a time when a better way was needed to boost the reliability and improve the manufacturability of semiconductors The basic design which was chosen for SLT Solid Logic Technology in the 1960s was easily extended to integrated circuits in the 70s and VLSI in the 80s and 90s Three I O bumps have grown to 3000 with even more anticipated for the future The package families have evolved from thick film SLT to thin film metallized ceramic to co fired multi layer ceramic A later family or ceramics with matching expansivity to sili con and copper internal wiring was developed as a predecessor of the chip interconnection revolution in copper multilevel submicron wiring Powerful server packages have been de veloped in which the combined chip and package copper wiring exceeds a kilometer All of this was achieved with the constant objective of minimizing circuit delays through short efficient interconnects Handbook of Lead-Free Solder Technology for Microelectronic Assemblies Karl J. Puttlitz,Kathleen

A. Stalter,2004-02-27 This reference provides a complete discussion of the conversion from standard lead tin to lead free solder microelectronic assemblies for low end and high end applications Written by more than 45 world class researchers and practitioners the book discusses general reliability issues concerning microelectronic assemblies as well as factors specif

Robust Design of Microelectronics Assemblies Against Mechanical Shock, Temperature and Moisture E-H Wong,Y.-W. Mai,2015-05-23 Robust Design of Microelectronics Assemblies Against Mechanical Shock Temperature and Moisture discusses how the reliability of packaging components is a prime concern to electronics manufacturers The text presents a thorough review of this important field of research providing users with a practical guide that discusses theoretical aspects experimental results and modeling techniques The authors use their extensive experience to produce detailed chapters covering temperature moisture and mechanical shock induced failure adhesive interconnects and viscoelasticity Useful

program files and macros are also included Discusses how the reliability of packaging components is a prime concern to electronics manufacturers Presents a thorough review of this important field of research providing users with a practical guide that discusses theoretical aspects experimental results and modeling techniques Includes program files and macros for additional study

Quality Conformance and Qualification of Microelectronic Packages and Interconnects Michael G. Pecht, Abhijit Dasgupta, John W. Evans, Jillian Y. Evans, 1994-12-13 All packaging engineers and technologists who want to ensure that they give their customers the highest quality most cost effective products should know that the paradigm has shifted It has shifted away from the MIL STDs and other government standards and test procedures that do not cost effectively address potential failure mechanisms or the manufacturing processes of the product It has shifted decisively towards tackling the root causes of failure and the appropriate implementation of cost effective process controls quality screens and tests This book's groundbreaking science based approach to developing qualification and quality assurance programs helps engineers reach a new level of reliability in today's high performance microelectronics It does this with powerful Techniques for identifying and modeling failure mechanisms earlier in the design cycle breaking the need to rely on field data Physics of failure product reliability assessment methods that can be proactively implemented throughout the design and manufacture of the product Process controls that decrease variabilities in the end product and reduce end of line screening and testing A wide range of microelectronic package and interconnect configurations for both single and multi chip modules is examined including chip and wire bonds tape automated TAB flip TAB flip chip bonds high density interconnects chip on board designs COB MCM 3 D stack and many more The remaining package elements such as die attachment case and lid leads and lid and lead seals are also discussed in detail The product of a distinguished team of authors and editors this book's guidelines for avoiding potential high risk manufacturing and qualification problems as well as for implementing ongoing quality assurance are sure to prove invaluable to both students and practicing professionals For the professional engineer involved in the design and manufacture of products containing electronic components here is a comprehensive handbook to the theory and methods surrounding the assembly of microelectronic and electronic components The book focuses on computers and consumer electronic products with internal subsystems that reflect mechanical design constraints cost limitations and aesthetic and ergonomic concerns Taking a total system approach to packaging the book systematically examines basic chip and computer architecture design and layout interassembly and interconnections cooling scheme materials selection including ceramics glasses and metals stress vibration and acoustics and manufacturing and assembly technology 1994 0 471 53299 1 800 pp
