Money Plan Financial Aspects Of East E:

Money and Plan Gregory Grossman, 2023-11-10 Money and Plan concerns the changing role of money and finance in the East European countries as they enact economic reforms designed to decentralize economic decisions extend enterprise autonomy and rationalize the management of their economies The book is the first in the Western world to address itself directly to this theme In the Stalinist economic system which all European communist countries shared until the mid sixties and which most still do money lays a subordinate role In the production sector its use in planning and by state owned enterprises has been restricted and circumscribed in many ways Objectives and performance standards are defined in physical terms i e in physical units of inputs and output Planning also is executed in physical units Although banking and other financial institutions exist they mainly supervise enterprises rather than redistribute national resources or appraise commercial prospects As for foreign trade it has been conducted largely on a barter basis Nevertheless insofar as money has been used it has posed a number of important problems One of these has been chronic inflationary pressure In the present volume two contributors investigate the historical record and the cause of inflation in Poland and develop theoretical models to explain the phenomenon Inflation is only one national economic problem raised by current forms requiring new monetary and financial policies Decentralization also raises important questions of full employment balance of payments management sectoral and regional relations and incomes policy matters that will have to be handled increasingly by monetary and financial means often quite similar to those developed and practices in the West Moreover as individual enterprises gain more autonomy in their current operations and investment and as physical planning and control are curtailed credit policies instruments and institutions will have to be devised to guide micro economic activity in consonance with national plans The East European countries that are carrying economic reform much further than the rest are Czechoslovakia and Hungary which intend to introduce a functioning market mechanism together with considerable enterprise autonomy in the production state owned sector Three contributors consider the case specially Another contributor discusses the major attempt thus far by the East European countries to abandon bilateral barter like trade among themselves in favor of a financial framework for multilateral clearing and a new monetary unit the transferable ruble The editor's Introduction and a concluding chapter by a final contributor view the changing role of money and finance in comprehensive terms This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1968 **Finance and Development Planning in Turkey** Maxwell J. undergoing fundamental institutional change the market mechanism is replacing central planning So far the achievements are impressive In the mid 1980s the country failed to feed its population suffered from hyperinflation and faced general economic stagnation In the early 1990s the annual economic growth rate had accelerated to some eight to nine percent the inflation rate had fallen to two digit levels sometimes even lower and the country had become one of the world s largest rice exporters Add some more details the increased foreign trade the inflow of foreign investments the diversification of agriculture and e various reform measures taken to alter the basic economic structure and the success story of the Vietnamese transition is told The country has hence followed the same path as its northern neighbor China and provided a counterexample to much more cumbersome processes that have been adopted in a number of other transforming countries notably those of the former USSR This transition is by no means over Indeed it is misleading to think of transition as a process that departs from a well defined pre condition and moves towards an equally well defined end point Banking in Transition G. Robins,2000-02-17 The book asks whether transplanting banks can solve the problems involved in creating a well functioning market economy from outside looking especially at the virtually complete takeover of East German banks by their Western counterparts after unification Drawing on a wide range of English and German sources and fieldwork interviews across Germany it argues that there are no quick fix solutions to transition to a market Implications are discussed for East Germany and for other previously centrally planned economies and the global implications of foreign ownership in banking are considered **Issues in Reforming Financial Systems in Eastern Europe** Alfredo E.
