**Soft Methods for Integrated Uncertainty Modelling** Jonathan Lawry, Enrique Miranda, Alberto Bugarin, Shoumei Li, Maria Angeles Gil, Przemyslaw Grzegorzewski, Olgierd Hryniewicz, 2007-10-08 The idea of soft computing emerged in the early 1990s from the fuzzy systems community and refers to an understanding that the uncertainty, imprecision and ignorance present in a problem should be explicitly represented and possibly even exploited rather than either eliminated or ignored in computations. For instance, Zadeh defined Soft Computing as follows: Soft computing differs from conventional hard computing in that, unlike hard computing, it is tolerant of imprecision, uncertainty and partial truth. In effect, the role model for soft computing is the human mind. Recently, soft computing has to some extent become synonymous with a hybrid approach combining AI techniques including fuzzy systems, neural networks and biologically inspired methods such as genetic algorithms. Here, however, we adopt a more straightforward definition consistent with the original concept. Hence, soft methods are understood as those uncertainty formalisms not part of mainstream statistics and probability theory which have typically been developed within the AI and decision analysis community. These are mathematically sound uncertainty modelling methodologies which are complementary to conventional statistics and probability theory.

*Human-Centric Decision-Making Models for Social Sciences* Peijun Guo, Witold Pedrycz, 2013-11-01 The volume delivers a wealth of effective methods to deal with various types of uncertainty inherently existing in human-centric decision problems. It elaborates on comprehensive decision frameworks to handle different decision scenarios which help use effectively the explicit and tacit knowledge and intuition model, perceptions and preferences in a more human-oriented style. The book presents original approaches and delivers new results on fundamentals and applications related to human-centered decision-making approaches to business, economics and social systems. Individual chapters cover multi-criteria, multi-attribute decision-making, decision-making with prospect theory, decision-making with incomplete probabilistic information, granular models of decision-making and decision-making realized

with the use of non additive measures New emerging decision theories being presented as along with a wide spectrum of ongoing research make the book valuable to all interested in the field of advanced decision making The volume self contained in its nature offers a systematic exposure to the concepts design methodologies and detailed algorithms A prudent balance between the theoretical studies and applications makes the material suitable for researchers and graduate students in information computer sciences psychology cognitive science economics system engineering operation research and management science risk management public and social policy

**New Frontiers in Scientific Discovery** Zdzisław Pawlak,2007 Zdzislaw Pawlak is a great scientist and a great human being This volume contains a short perspective on the life and work of Zdzislaw Pawlak It reflects the influence of a number of research initiatives by Pawlak in a whole range of research areas

**Rule Systems Theory** Helena Flam,Marcus Carson,2008 Explaining the complexity of social life remains the central challenge of the social sciences This book offers a variety of theoretical empirical explorations and applications inspired by an important neo institutional approach to tackling this complexity the rule systems theory Its point of departure is the assumption that institutions and cultural formations possess causal powers and relative autonomy constraining and enabling people s social actions and interactions Structural and cultural properties of society are carried by transmitted and reformed by human agents whose interactions generate reproduce elaborate and transform structures The contributors are highly accomplished economists sociologists and political scientists who come from the US and several European countries The book is meant as a Festschrift for Tom Burns a central figure in the development of the rule systems theory
