Reproductive Health and Gender Equality Guang-zhen Wang,2016-04-08 Since the late 1990s approaches to women s reproductive health has shifted from a service based model to a human rights approach This approach associates reproductive health with freedom from discrimination and enjoyment of a satisfying and safe sex life and full access to

information and services related to reproduction In spite of this shift and the global effort to promote women s reproductive health through the enhancement of human rights and gender equality progress has been very slow In this book the author fills a much needed empirical study of women s reproductive health The author assesses data from 137 developing countries or areas and challenges the prevailing bioscience and public health models by linking women s reproductive health to gender equality measures and development policies Discussion on abortion rights regional variations and reproductive health needs among refugees and internally displaced persons are also discussed This is a timely study which provides a theoretical and social policy basis for monitoring and improving women s reproductive health in developing countries This is particularly important in the light of insufficient research in the field and a lack of analysis on the empirical and theoretical linkages between reproductive health and gender equality The book will be of interest to researchers professionals and students interested in women s health issues gender women s studies and human rights
