animals in a common bond of sensing feeling and communication Be it singing wolves dancing bees or writhing rock and roll dancers all communicate a treasure chest of meaning in the absence of the spoken word Approximately 700 million years ago a unique type of cell came into being the neuron This naked neuron or nerve cell lacked a protective fatty sheath Still it marked a monumental and world altering development since it would become the building block of the brain The naked neuron generated a revolutionary change resulting in a greater complexity and subtlety of thought Dr Joseph vividly depicts how neurons conferred on early humans advanced powers of mental and sensory acuity including the gift of remembering one's past and contemplating the future Although humans possess much of the same ancient brain tissue as our fellow primates Dr Joseph reveals to us the singular features of the human brain that have enabled humans uniquely to develop complex spoken language He holds us spellbound revealing that although the new and old brain tissue are couched within the same brain each often has difficulty understanding the impulses and language of the other This ground breaking book draws on Dr Joseph's brilliant and original research and theories fusing the latest discoveries made in neuroscience sociobiology and anthropology He illuminates how the languages of the body and brain enhance intuitive understanding and spur a thirst for knowledge for its own sake The human body and brain together are a veritable living museum which contains billions of cells with a long evolutionary history As this unforgettable book shows it is the communication of this panoply of cells the residues of the past merged with the musings of the present that gives rise to life love art science literature and the ceaseless desire to search for and acquire knowledge

Biosociology of Dominance and Deference Allan Mazur, 2005-08-31 This short engaging volume develops new and sociologically sophisticated concepts to bring the fields of biology and sociology together It is about the social biology of face to face dominance interactions and explores the evolution of behavior through connections among biol

The Effect of Length of Blind Alleys on Maze Learning Elizabeth Lockwood Thompson, G. V. Hamilton, Harry Hanes Wylie, Joseph Peterson, Robert Mearns Yerkes, 1919

The First Human Ann Gibbons, 2007-04-10 In this dynamic account award winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions When and where was the dawn of humankind Following four intensely competitive international teams of scientists in a heated race to find the missing link the fossil of the earliest human ancestor Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters Tim White the irreverent Californian who discovered the partial skeleton of a primate that lived 4.4 million years ago in Ethiopia French paleontologist Michel Brunet who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago and two other groups one led by zoologist Meave Leakey the other by British geologist Martin Pickford and his French paleontologist partner Brigitte Senut who enter the race with landmark discoveries of their own Through scrupulous research and vivid first person reporting *The First Human* reveals the perils and the promises of fossil hunting on a grand competitive scale

Sociology, Concepts of Group Behaviour Andreas Sofroniou, 2013-08-09 Sociology as a social science refers to the systematic study of

the development structure and functioning of society In the last two centuries sociologists analysed many facets of their own societies in the more general context of observing the causes and consequences of the transition from traditional pre industrial life to modern societies The fundamental postulate of sociology is that human beings act not by their own free decisions taken rationally but under the influence of history and culture and the expectations and demands of others human beings are both the products and the makers of their societies During the 20th century sociologists have been particularly interested in the influence of role status class and power on experience and behaviour in the family and in the community in the factors which contribute to cohesion and conflict in social structure and social stratification and in social problems such as crime drug addiction and domestic violence

Social Sciences and Philology Andreas Sofroniou, 2015-07 This tome consists of three books which deal with Social Sciences Philology and their various branches pertaining to the study of human society and social relationships The disciplines encompassed are anthropology demography economics geography political science psychology sociology philology epistemology and philosophy In the case of philology the book includes the literary contributions of the main European countries from the ancient times through to the current geographical and political divisions The countries included in the write up are Portugal Spain France Britain Germany Italy and Greece Also included in this write up are the subjects of history education and law as these disciplines are regarded by many as social sciences

The Primate Order Rebecca Steffoff, 2006 An overview of the characteristics habitat way of life and conservation status of various primates

Handbook of Neurosociology David D. Franks, Jonathan H. Turner, 2012-07-09 Until recently a handbook on neurosociology would have been viewed with skepticism by sociologists who have long been protective of their disciplinary domain against perceived encroachment by biology But a number of developments in the last decade or so have made sociologists more receptive to biological factors in sociology and social psychology Much of this has been encouraged by the coeditors of this volume David Franks and Jonathan Turner This new interest has been increased by the explosion of research in neuroscience on brain functioning and brain environment interaction via new MRI technologies with implications for social and psychological functioning This handbook emphasizes the integration of perspectives within sociology as well as between fields in social neuroscience For example Franks represents a social constructionist position following from G H Mead's voluntaristic theory of the act while Turner is more social structural and positivistic Furthermore this handbook not only contains contributions from sociologists but leading figures from the psychological perspective of social neuroscience
