Monoclonal Antibodies In Endocrine Research:

Monoclonal Antibodies in Endocrine Research Robert E. Fellows, George S. Eisenbarth, 1981 **Monoclonal Antibodies** Mary A. Ritter, Heather M. Ladyman, 1995-01-26 This book aims to provide a unique combination of the production by both cellular and molecular biology techniques structure and functional characteristics of monoclonal antibodies together with detailed discussions of the various analytic diagnostic and therapeutic applications *Monoclonal Antibodies* Heddy Zola, 1987-07-31 This book describes in detail tested techniques for the production and use of monoclonal antibodies It covers those aspects of interest to all scientists working with monoclonal antibodies and presents methods in a step by step format for easy reference The text serves as a laboratory manual and discusses rationale behind each method and the choices between methods It also provides a rational basis where several alternative methods are available

Monoclonal Antibodies in Clinical Diagnostic Medicine David Stewart Gordon, 1985 Biomedical Index to PHS-supported Research, 1991 **Receptors, Antibodies and Disease** David Evered, Julie Whelan, 2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world *Physiology of Membrane Disorders* Thomas E. Andreoli, Darrell D. Fanestil, Joseph F. Hoffman, Stanley G. Schultz, 2013-11-11 The second edition of *Physiology of Membrane Disorders* represents an extensive revision and a considerable expansion of the first edition Yet the purpose of the second edition is identical to that of its predecessor namely to provide a rational analysis of membrane transport processes in individual membranes cells tissues and organs which in turn serves as a frame of reference for rationalizing disorders in which derangements of membrane transport processes play a cardinal role in the clinical expression of disease As in the first edition this book is divided into a number of individual but closely related sections Part V represents a new section where the problem of transport across epithelia is treated in some detail Finally Part VI which analyzes clinical derangements has been enlarged appreciably THE EDITORS xi Preface to the First Edition The purpose of this book is to provide the reader with a rational frame of reference for assessing the pathophysiology of those disorders in which derangements of membrane transport processes are a major factor responsible for the clinical manifestations of disease In the present context we use the term membrane transport to refer to those molecular processes whose cardinal function broadly speaking is processes in a catholic sense the vectorial transfer of molecules either individually or as ensembles across biological interfaces the latter including those interfaces which separate different intracellular compartments the cellular and extracellular compartments and secreted fluids such as glomerular filtrate and extracellular fluids **Hybridoma Technology in the Biosciences and Medicine** Timothy Springer, 2013-11-11

Neurotransmitter Receptors Shozo Kito, 2013-11-11 This meeting was held commemorating Dr Kito's 10th Anniversary as

Professor of the Third Department of Internal Medicine Hiroshima University School of Medicine Dr Kito was born in 1927 in Nagoya graduated from Tokyo University School of Medicine and received his M D in 1951 He spent his first academic years as a research associate 1952 1968 at the Third Department of Internal Medicine Tokyo University School of Medicine During this period he studied for one year 1952 1953 at Illinois University School of Medicine and acquired his Ph D in 1959 In 1968 he became Instructor and in 1971 he was appointed as Assistant Professor of Tokyo Women s Medical College In 1973 he became Professor of the Third Department of Internal Medicine Hiroshima University School of Medicine Dr Kito is a clinician but he is always enthusiastic about basic medicine His major research field concerns neurotransmitters and their receptors in the central nervous system He prefers a combination of neurotransmitter immunohistochemistry and receptor autoradiography as research techniques He is also engaged in biochemical studies on amyloid proteins When the Eighth International Congress of Pharmacology was held in Tokyo in 1981 Dr Segawa Dr Yamamura and Dr Kuriyama organized a Satellite Symposium on Neurotransmitter Receptors in Hiroshima Dr Kito attended this meeting and was deeply impressed by the active presentations and discussions In order to make some contribution to the progress of neuro sciences Dr

Congress. House. Committee on Science. Subcommittee on Energy and Environment,2001 *Biochemical Actions of Hormones V12* Gerald Litwack,2012-12-02 Biochemical Actions of Hormones Volume XII is a compendium of papers discussing aspects of molecular biology with regard to hormone action and to certain hormone receptors One paper discusses the different approaches and strategies that are used in determining the amino acid sequence The paper also describes the structural organization of polyprotein precursors such as the peptide chemistry approach or the nucleic acid approach Another paper investigates the regulation of prolactin biosynthesis by peptide hormones as a model for peptidergic regulation of gene expression The paper defines in detail which components of the biosynthetic machinery are being regulated by the polypeptide hormones One paper also analyzes the molecular biology of the metallothioneins focusing on the glucocorticoid regulation of metallothioneins genes Experiments show that when the mouse MT I gene is activated in

lymphoid cells or transferred to other cells it still retains information needed in metal regulated expression though glucocorticoids can no longer regulate the same gene Other papers discuss the purification and properties of the nerve growth factor receptor and the thyrotropin receptor Micro biologists biochemists molecular biologists cellular biologists endocrinologists and scientists involved in cell research will find this collection valuable **The Beta-Adrenergic**

Biochemical Actions of Hormones Volume XI is a 12 chapter text that covers the general and specific biochemical aspects of polypeptide and steroid hormones The introductory chapters deal with the biochemical actions of the leukotrienes the cyclic adenosine monophosphate and the gonadotropin releasing hormone The next chapters highlight detailed contributions on polypeptide hormone research These chapters specifically tackle the insulin actions and the role of insulin in mammary gland development The last series of chapters on steroid hormones includes X ray crystallographic analysis of steroid structures and the significance of these studies on steroid receptor interactions These chapters also explore the analysis of the estrogen receptor with monoclonal antibodies the role of estrogen receptor in responsive mammalian cells the use of peroxidase as a marker of catechol estrogen action and the activation and stabilization of the glucocorticoid receptor This volume will be of great benefit to biochemists biologists endocrinologists and researchers who are interested in the hormonal action and regulation Immunoassay Technology. TECHNOLOGY VOL 2 PAL E BOOK **Idiotypy in Biology and Medicine** Heinz Köhler,Jacques Urbain,Pierre-André Cazenave,2013-10-22 Idiotypy in Biology and Medicine aims to serve the increasing interest and involvement in the practical aspects of idiotypy in biological systems The concept of idiotypy has received wide recognition and interest far beyond the area of immunology Experiments and interpretation of findings reported here clearly support the general nature of the idio type concept in manipulating biological systems to correct pathological conditions or to improve the immune adaptation to environmental factors The book is organized into three sections Section 1 discusses original concepts of idiotypic manipulations It reviews old and recent data important for the concept of an idio type network and reports on attempts to deal with the T cell receptor paradox explains the immune system in terms of a circular idio type network that can be demonstrated by sequential immunization and emphasizes the need for restrictions in network interactions Section 2 addresses the role and activity of idiotypic and antiidiotypic antibodies in the regulation of the immune system Section 3 takes the issue of idio type antiidiotypic out of the realm of the immune system and discusses it as a new principle to analyze and manipulate biological systems in general **Published Scientific Papers of the National Institutes of Health**

National Institutes of Health (U.S.),1982 Each issue lists papers published during the preceding year **Methods In Animal Physiology** Zdenek Deyl,2019-08-08 The aim of the present volume was to give an overview over different available methodological approaches The specialists may perhaps object that in their particular field the level of information is

superficial However let them look at other chapters in which different approaches are discussed and which surely will appear less superficial from the more general point of view We hope at least that crucial references can be traced throughout the book that would enable the readers to go in more detail when desired It can be traced throughout the book that would enable the readers to go in more detail when desired It was really one of our ideas to draw the survey of possibilities available If this can stimulate the readers to use ideas to draw the survey of possibilities available If this can stimulate the readers to use other methods that those they are routinely using the goals will be met
