Monomode Fiber Optic Design:

Monomode Fiber-Optic Design Donald G. Baker, 2012-12-06 Fiber optics is a transmission technique that uses electrical signals to modulate a light source and thereby produce an optical signal proportional to the electrical signal. These optical signals contain information that is transmitted via a glass waveguide to a light sensitive receiver. Fiber optics has a distinct advantage over copper networks for some applications. The objective of this book is to explore monomode as opposed to multimode applications of fiber optics to local area networks LANs which have become a rather important aspect of this technology because of the ever increasing growth of LANs. Monomode fiber optics requires the use of coherent light sources such as laser diodes YAGs and HeNe lasers to name just a few. It has some distinct advantages over multimode that this text will investigate in a cursory manner. The author's previous book on multimode fiber optics **Fiber Optic Design and Applications** published by Reston would be helpful but not necessary to augment this text. Monomode or single mode fiber optics is the present direction of the state of the art because of its superior performance. Since a few problems existed that limited the growth of monomode technology at the time this book was being written several sections of the text will be devoted to examining the shortcomings as well as the performance advantages of this technology.

The first edition of this dictionary was written during the years preceding 1980. No fiber optics glossary had been published by any recognized standards body. No other dictionaries in fiber optics had been published. A significant list of fiber optics terms and definitions NBS Handbook 140 Optical Waveguide Communications Glossary was issued in 1982 by the National Bureau of Standards now the National Institute of Standards and Technology. Since then several publications by standards bodies contained fiber optics terms and definitions. In 1984 the Institute of Electrical and Electronic Engineers published IEEE Standard 812 1984 Definitions of Terms Relating to Fiber Optics. In 1986 the National Communication System published Federal Standard FED STD I037A Glossary of Telecommunication Terms containing about 100 fiber optics terms and definitions. In 1988 the Electronic Industries Association issued EIA 440A Fiber Optic Terminology. All of these works were based on NBS Handbook 140 compiled 10 years earlier. Currently the International Electrotechnical Commission is preparing IEC Draft 731 Optical Communications Terms and Definitions. Work in fiber optics terminology is being contemplated in the International Organization for Standardization and the International Telecommunications Union. None of these works constitutes a comprehensive coverage of the field of fiber optics. Each was prepared by professional people representing specific interest groups. Each work was aimed at specific audiences: research activities, development activities, manufacturers, scientists, engineers and so on.
