Mononuclear Phagocytes In Cell Biology:

Mononuclear Phagocytes in Cell Biology Gabriel Lopez-Berestein, Jim Klostergaard, 1992-12-07 Mononuclear Phagocytes in Cell Biology provides a state of the art review of the biological biochemical and molecular processes involved in macrophage activation The book focuses on the role of macrophage signals in health and disease which are discussed with particular attention to the physiological role of macrophages in homeostasis The role played by macrophages in bone metabolism and the role of cytokines in diseases affecting the macrophage e g HIV and leishmaniasis are covered as well The book also exploits the potential of macrophage mimicry as a therapeutic tool Mononuclear Phagocytes in Cell Biology is a practical reference for cell biologists medical microbiologists molecular biologists immunologists hematologists immunogeneticists immunopharmacologists and other basic and clinical researchers interested in macrophage development biology and differentiation *Mononuclear Phagocytes* R. van Furth, 2013-06-29 Methods for Studying Mononuclear Phagocytes Dolph Adams, 2012-12-02 Methods for Studying Mononuclear Phagocytes is a practical guide to the study of mononuclear phagocytes that brings together various well established and useful methods for examining these cells The technical protocols have been made detailed specific practical and inclusive of the necessary mystique for immediate and direct application in the laboratory The book is divided into 11 parts arranged according to the sequence of steps that would generally be followed to study a given population of mononuclear phagocytes I methods for obtaining and culturing populations of human and animal mononuclear phagocytes II methods for separating populations of leukocytes to enrich or deplete their content of mononuclear phagocytes II criteria and techniques for identifying mononuclear phagocytes IV methods for quantifying the number of mononuclear phagocytes V techniques for studying the morphology of mononuclear phagocytes VI methods for quantifying the biochemical constituents of mononuclear phagocytes VII methods of quantifying phagocytosis pinocytosis and chemotaxis VIII methods for quantifying the secretory products of mononuclear phagocytes IX procedures for quantifying the destruction of tumor cells and of microorganisms by mononuclear phagocytes X methods for studying the cell biology of mononuclear phagocytes and XI techniques for studying mononuclear phagocytes in vivo including procedures for estimating their kinetics accumulation identification and microbicidal properties *Mononuclear Phagocytes* R. van Furth, 2013-04-17 Mononuclear phagocytes which include macrophages monocytes and their precursor cells are the most important cells in the host defence against micro organisms and tumor cells During the last twenty five years research on the biology of mononuclear phagocytes has increased tremendously This motivated Professor R van Furth to organize five international conferences on this subject in Leiden the Netherlands The edited proceedings of these meetings were published in 1970 *Mononuclear Phagocytes* in 1975 *Mononuclear Phagocytes in Immunity Infections and Pathology* in 1980 *Mononuclear Phagocytes Functional Aspects* and in 1985 *Mononuclear Phagocytes Characteristics Physiology and Function* Reviews of these volumes published in international journals praised them as the most up to date

state of the art publications The publication of 1991 includes 88 chapters written by more than 200 authors *Phagocytes and Cellular Immunity* Hans H. Gadebusch, 2020-05-11 First Published in 1979 Each of the first two papers deal with the particular cellular component and its role in containing appropriate pathogen *Dendritic Cell and Macrophage Nomenclature and Classification* Florent Ginhoux, Martin Williams, Shalin Naik, 2016-07-14 The mononuclear phagocyte system MPS comprises dendritic cells DCs monocytes and macrophages M s that together play crucial roles in tissue immunity and homeostasis but also contribute to a broad spectrum of pathologies They are thus attractive therapeutic targets for immune therapy However the distinction between DCs monocytes and M subpopulations has been a matter of controversy and the current nomenclature has been a confounding factor DCs are remarkably heterogeneous and consist of multiple subsets traditionally defined by their expression of various surface markers While markers are important to define various populations of the MPS they do not specifically define the intrinsic nature of a cell population and do not always segregate a bona fide cell type of relative homogeneity Markers are redundant or simply define distinct activation states within one subset rather than independent subpopulations One example are the steady state CD11b DCs which are often not distinguished from monocytes monocyte derived cells and macrophages due to their overlapping phenotype Lastly monocyte fate during inflammation results in cells bearing the phenotypic and functional features of both DCs and M s significantly adding to the confusion In fact depending on the context of the study and the focus of the laboratory a monocyte derived cell will be either be called monocyte derived DCs or macrophages Because the names we give to cells are often associated with a functional connotation this is much more than simple semantics The name we give to a population fundamentally changes the perception of its biology and can impact on research design and interpretation Recent evidence in the ontogeny and transcriptional regulation of DCs and M s combined with the identification of DC and M specific markers has dramatically changed our understanding of their interrelationship in the steady state and inflammation In steady state DCs are constantly replaced by circulating blood precursors that arise from committed progenitors in the bone marrow Similarly some M populations are also constantly replaced by circulating blood monocytes However others tissue M s are derived from embryonic precursors are seeded before birth and maintain themselves in adults by self renewal In inflammation such differentiation pathways are fundamentally changed and unique monocyte derived inflammatory cells are generated Current DC monocyte and M nomenclature does not take into account these new developments and as a consequence is quite confusing We believe that the field is in need of a fresh view on this topic as well as an upfront debate on DC and M nomenclature Our aim is to bring expert junior and senior scientists to revisit this topic in light of these recent developments This Research Topic will cover all aspects of DC monocyte and M biology including development transcriptional regulation functional specializations in lymphoid and non lymphoid tissues and in both human and mouse models Given the central position of DCs monocytes and M s in tissue homeostasis immunity and disease this topic should be of interest to a large

spectrum of the biomedical community Role of CD1- and MR1-restricted T cells in Immunity and Disease Kazuya Iwabuchi, Luc Van Kaer, 2019-10-18 CD1 and MR1 are major histocompatibility complex MHC class I related proteins that bind and present non peptide antigens to subsets of T cells with specialized functions CD1 proteins typically present lipid antigens to CD1 restricted T cells whereas MR1 presents vitamin B based ligands and a variety of drugs and drug like molecules to MR1 restricted T cells The CD1 family of antigen presenting molecules has been divided into two groups Group 1 contains CD1a CD1b and CD1c and Group 2 contains CD1d Additionally CD1e is expressed intracellularly and is involved in the loading of lipid antigens onto Group 1 CD1 proteins Humans express both Groups 1 and 2 CD1 proteins whereas mice only express CD1d Group 1 CD1 proteins present lipid antigens to T cells that generally express diverse T cell receptors TCRs and exhibit adaptive like functions whereas CD1d presents lipid antigens to subsets of T cells that express either diverse or highly restricted TCRs and exhibit innate like functions CD1d restricted T cells are called natural killer T NKT cells which includes Type I or invariant NKT iNKT cells expressing semi invariant TCRs and Type II NKT cells expressing more diverse TCRs CD1 restricted T cells have been implicated in a wide variety of diseases including cancer infections and autoimmune inflammatory and metabolic diseases Additionally NKT cells have been targeted for immunotherapy of disease with ligands such as galactosylceramide for iNKT cells or sulfatide for Type II NKT cells Like iNKT cells MR1 restricted T cells express semi invariant TCRs and display innate like functions MR1 restricted T cells also called mucosal associated invariant T MAIT cells have been implicated in immune responses against a variety of pathogens such as Mycobacterium tuberculosis Pseudomonas aeruginosa Helicobacter pylori hepatitis C virus and influenza virus Moreover these cells contribute to autoimmune and inflammatory diseases including colitis rheumatoid arthritis psoriasis lupus and diabetes

Mononuclear Phagocyte Biology Alvin Volkman, 1984 Wintrobe's Clinical Hematology John P. Greer, 2009 Now available in a thoroughly revised Twelfth Edition Wintrobe's Clinical Hematology continues to be an industry leader with its ability to correlate basic science with the clinical practice of hematology With the first edition of Wintrobe's Clinical Hematology published in 1942 clearly establishing hematology as a distinct subspecialty of Internal Medicine the latest edition continues the influence of the Wintrobe name and helps to set this book apart from the competition With its strong focus on the clinical aspects of hematology the book has generated a strong following among internists and general practitioners who want a single resource to consult for their patients who present any blood related disorder The Twelfth Edition is in full color for the first time boasts a new editorial team and includes expanded coverage of new medications and four new chapters on Newborn Anemias Pathology of LHC Spleen Tumors and Myeloproliferative Disorders and Mast Cell Disease A companion Website will offer the fully searchable text and an image bank *Clinical Approach to Infection in the Compromised Host* R. Rubin, 2013-11-11 Infection in the Compromised Host has become a classic chapter in textbooks devoted to infectious diseases and internal medicine The numbers of compromised hosts are increasing in the era of modern

medicine because of our expanded capabilities to deal with difficult diseases especially neoplasms As a consequence microbiologic complications related to the intensive care administered to these patients are increasing as well Under these circumstances not only does the underlying illness create conditions favorable for the development of unusual infections but often the therapy contributes to the acquisition of potential pathogens that turn into agents responsible for severe and frequently fatal disease Granulocytopenia and immunosuppression have been the two key factors in predisposing patients with cancer and other serious diseases to severe bacterial infections Colonization by hospital acquired pathogens and breaks in the anatomic barriers as a result of disease or medical intervention have contributed to the high incidence of infectious diseases in these patients Although there is some overlap between the types of infection in granulocytopenic and immunosuppressed hosts each of these clinical entities has distinctive features that justify considering them separately reserving the term immunocompromised hosts only when referring to patients who are predisposed to opportunistic infections For about two decades infections in granulocytopenic patients have attracted the attention of clinicians because they represent a model for the study of antimicrobial drugs in hosts deprived of an essential element of defense against bacterial infection that is an adequate number of normally functioning granulocytes

Macrophages and Natural Killer Cells Sigurd J. Normann, 2012-12-06 This book is the outcome of a meeting held in Davos Switzerland February 7-12 1982 focused primarily on mononuclear phagocytes and on natural killer NK cells This IX International RES Congress was attended by 489 scientists from 31 countries and there were 340 scientific presentations in oral or poster session The essential purpose of the Congress was to bring together scientists representing various aspects of mononuclear phagocyte biology to review and examine critically the effects and mechanisms of macrophage growth control as well as the participation of these cells in the afferent and efferent limbs of the immune response Additional topics included the production and distribution of mononuclear phagocytes the intrinsic and extrinsic regulation of these cells and the origin nature function and regulation of NK cells The ultimate goal of the Congress was to enhance communication between scientists in various countries and disciplines so that new research directives could be defined with which to explore basic aspects of macrophage and NK cell participation in the control of cancer and infection

Biology of Growth Factors J. E. Kudlow, 2013-11-09 Growth factors are elaborated to control the growth of cells in such physiological processes as wound healing tissue regeneration and the immune response Abnormal production of these growth factors their receptors or intracellular mediators of their action may lead to disease states including oncogenesis This volume will focus on exciting developments in defining the precise molecular lesions that permit the conversion of controlled proliferative signals to neoplasia on the possible involvement of growth factors in the development of blood vessel diseases as seen in diabetes and atherosclerosis on the altered immune surveillance that leads to autoimmunity and on the fundamental mechanisms by which growth factors signal their target cells We expect that the contents of this volume will help promote understanding of the role of these

fundamental biological processes and their alterations in a wide variety of disease states and stimulate new investigations in this important area of biomedical research
