Indian Books in Print ,2003 **India in Translation through Hindi Literature** Maya Burger, Niccolò Pozza, 2010 What role have translations from Hindi literary works played in shaping and transforming our knowledge about India In this book renowned scholars translators and Hindi writers from India Europe and the United States offer their approaches to this question Their articles deal with the political cultural and linguistic criteria germane to the selection and translation of Hindi works the nature of the enduring links between India and Europe and the reception of translated texts particularly through the perspective of book history More personal essays both on the writing process itself or on the practice of translation complete the volume and highlight the plurality of voices that are inherent to any translation As the outcome of an international symposium held at the University of Lausanne Switzerland in 2008 **India in Translation through Hindi Literature** engages in the building of critical histories of the encounter between India and the West the use and impact of translations in this context and Hindi literature and culture in connection to English post colonial power literature and culture **The Grammar of Politics and Performance** Shirin M Rai, Janelle Reinelt, 2014-12-05 This volume brings together important work at the intersection of politics and performance studies While the languages of theatre and performance have long been deployed by other disciplines these are seldom deployed seriously and pursued systematically to discover the actual nature of the relationship between performance as a set of behavioural practices and the forms and the transactions of these other disciplines This book investigates the structural similarities and features of politics and performance which are referred to here as grammar a concept which also emphasizes the common communicational base or language of these fields In each of the chapters included in this collection key processes of both politics and performance are identified and analyzed demonstrating the critical and indivisible links between the fields The book also underlines that neither politics nor performance can take place without actors who perform and spectators who receive evaluate and react to these actions At the heart of the project is the ambition to bring about a paradigm change such that politics cannot be analyzed seriously without a sophisticated understanding of its performance All the chapters here display a concrete set of events practices and contexts within which politics and performance are inseparable elements This work will be of great interest to students and scholars in both International Relations and Performance Studies *Indian National Bibliography* B. Kumar, Dr. Narendra Y. Patil, Prof. Dr. Nirmal Kumar, J.I., Dr. Hiren B. Soni, Biodiversity most commonly refers to the number and variety of distinct organisms species living on the Earth Biological variety encompasses all life forms on earth including species of plants animals and microorganisms and the ecosystem and ecological processes Biodiversity stands for the number variety and variability of living organisms Biodiversity areas are featuring outstanding concentrations of species and experiencing incomparable loss of habitat It was observed recently that the present 25 hotspots of the world have been raised to 34 hotspots with a new list of 9 new hotspots in the great range of the Himalayas and the island nation of Japan In general the 34 important areas once covered 15 70% of the Earth s land surface In total 86% of the hotspots have already been destroyed such that the intact remnants of the hotspots now cover only 2 30% of the Earth s land surface These areas together now cover 1 4% of the land on the Earth Tropical forests appear in 15 hotspots Mediterranean type zones in 5 and 9 hotspots are majorly of islands 16 hotspots are in tropical area about 20% of the human population lives in the hotspot regions India is one of the leading hotspots in terms of endemics The three hotspot of Biodiversity in India are i Eastern Himalaya harbouring 9 000 species of plants with 3500 endemic species ii Western Ghats possessing 5800 plant species with about 2000 endemics and iii The Andaman and Nicobar Islands harbour about 83% endemic species The Western Ghats of India extends upto 1 80 000 sq km extraordinarily rich in biodiversity The existing forests are highly fragmented and facing the prospect of increasing degradation The Western Ghats cover the portion of the Gujarat Maharashtra Kerala Karnataka and Tamilnadu Keeping all these in minds the present book Plant Biodiversity Ethnobotany and Anthropogenic Interventions of Western Ghats Forests Saputara and Purna covers an in depth and systematic study of forest vegetation in terms of community structure analysis qualitative community structure quantitative community structure ethnobotanical studies and anthropogenic pressures in biodiversity rich forests Saputara and Purna a northern extreme regions of Western Ghats The book would definitely be the need of an hour for forest managers forest conservationists policy makers and decision authorities to prevent the unrestrained exploitation of forest biodiversity and resources destruction of potential forested habitats and uncontrolled interactions of man and technology with forest ecosystems of the world **Cash Crops** P.M. Priyadarshan, S. Mohan Jain, 2021-10-18 Cash crops are grown and sold for monetary gain and not necessarily for sustenance They include coffee tea coconut cotton jute groundnut castor linseed cocoa rubber cassava soybean sweet potato potato wheat corn and teff While some of these crops have been improved for realizing yield potential breeding of many of them is still in infancy Crops that underwent rigorous breeding have eventually lost much of the diversity due to extensive cultivation

with a few improved varieties and the diversity in less bred species is to be conserved Over the past years scholars and policy makers have become increasingly aware of the short and long run impact of climatic factors on economic food security social and political outcomes Genetic diversity natural and induced is much needed for the future generations to sustain food production with more climate resilient crops In contrast crop uniformity produced across the farm fields in the form of improved varieties is genetically vulnerable to biotic and abiotic stresses Thus it is essential and challenging to address the issue of compromising between maximizing crop yield under a given set of conditions and minimizing the risk of crop failure when conditions change Cash crops are grown in an array of climatic conditions Many of the world s poor still live in rural areas Many are subsistence farmers operating very small farms using very little agricultural inputs for achieving marketable outputs Conserving the diversity of these crops and addressing all issues of crop culture through modern tools of biotechnology and genomics is a real challenge We believe the focus of this book is to fill an unmet need of this and other grower communities by providing the necessary knowledge albeit indirectly via the academics to manage the risks of cash crops breeding through managing genetic diversity
