Reference To Abstract Objects In Discourse:

Reference to Abstract Objects in Discourse Nicholas Asher, 1993-04-30 This volume is about abstract objects and the ways we refer to them in natural language Asher develops a semantical and metaphysical analysis of these entities in two stages The first reflects the rich ontology of abstract objects necessitated by the forms of language in which we think and speak A second level of analysis maps the ontology of natural language metaphysics onto a sparser domain a more systematic realm of abstract objects that are fully analyzed This second level reflects the commitments of real metaphysics The models for these commitments assign truth conditions to natural language discourse Annotation copyright by Book News Inc Portland OR

Abstract Entity Anaphora in Argumentative Texts Donghong Liu, 2023-08-21 This book focuses on abstract entity anaphora in argumentative texts with Asher's 1993 Segmented Discourse Representation Theory SDRT as the theoretical framework investigating its pragmatic features and exploring its referent interpretation The data sources include more than 160 000 word argumentative texts 80 000 word English texts and 80 000 word Chinese ones selected from newspapers journals and books in China and America At first a comparative study was done between Chinese and English argumentative texts so as to compare the pragmatic features of abstract entity anaphora in the two languages Then referent interpretation is explored within the SDRT framework Although SDRT can account for most of the instances of abstract entity anaphora it appears incompetent in dealing with some phenomena in the data of our study Seven problems in SDRT were found and corresponding solutions were proposed in an attempt to improve this theory In general this book has three aspects of significance Firstly it establishes abstract entity anaphora as an independent and a special kind of anaphora Secondly the research methods are the combination of empirical study and theoretical hypotheses as well as the coalescent of dynamic study and static study Thirdly the book is not limited to the application of SDRT to Mandarin Chinese and backward anaphora Instead based on the linguistic phenomena in the data it challenges and improves the theory and it even negates some aspects and meanwhile brings forward new solutions

Cross-Linguistic Semantics Cliff Goddard, 2008-04-10 Cross

linguistic semantics investigating how languages package and express meanings differently is central to the linguistic quest to understand the nature of human language This set of studies explores and demonstrates cross linguistic semantics as practised in the natural semantic metalanguage NSM framework originated by Anna Wierzbicka The opening chapters give a state of the art overview of the NSM model propose several theoretical innovations and advance a number of original analyses in connection with names and naming clefts and other specificational sentences and discourse anaphora Subsequent chapters describe and analyse diverse phenomena in ten languages from multiple families geographical locations and cultural settings around the globe Three substantial studies document how the metalanguage of NSM semantic primes can be realised in languages of widely differing types Amharic Ethiopia Korean and East Cree Each constitutes a lexicogrammatical portrait in miniature of the language concerned Other chapters probe topics such as inalienable possession in Koromu Papua New Guinea epistemic verbs in Swedish hyperpolysemy in Bunuba Australia the expression of momentariness in Berber ethnogeometry in Makasai East Timor value concepts in Russian and virtuous emotions in Japanese This book will be valuable for linguists working on language description lexical semantics or the semantics of grammar for advanced students of linguistics and for others interested in language universals and language diversity

Information Structure in a Cross-Linguistic Perspective , 2016-08-29 The present volume draws together contributions from a number of scholars with an interest in empirical cross linguistic description Most of the papers were first presented at the symposium Information Structure in a Cross linguistic Perspective held in Oslo in November December 2000 The descriptions are functionally

oriented and their common focus is how information structure in a broad sense can be compared across languages. Information structure has been approached in a variety of ways by the authors so as to give a broad picture of this fundamental principle of text production involving the way in which a speaker/writer chooses to present a message in terms of given/new information focus, cohesion and point of view. Central to much of the research is the problem of establishing criteria for isolating linguistic constraints on language use from cultural/linguistic conventions in text production. The linguistic comparison includes English, German and/or one of the Scandinavian languages with sidelights to other languages. Most of the papers are text or corpus based and the ongoing work on parallel corpora in Scandinavia is reflected in several contributions.

The book presents a wealth of state-of-the-art research and development results from the field of natural language processing with emphasis on text, speech and spoken language.

The Logiphro Dilemma James C. McGlothlin, 2017-01-10. Is God above logic? If so, is he irrational? Is God subservient to logic? If so, is he really omnipotent? These questions are similar to Socrates' infamous challenge to explaining God's relation to morality, the so-called Euthyphro dilemma. In this book, McGlothlin argues that the Euthyphro challenge can be extended to help explain the relationship between God and logic, what he calls the Logiphro dilemma. Logic, on this account, depends on aspects of God's mind other than God's will. This is a nonstandard form of theistic logical dependence. It contrasts both with the standard form of theistic logical dependence according to which logic depends on God's will and with theistic logical independence according to which logic is independent of God. These rival views can be seen as the horns of the Logiphro dilemma: either logic depends on God's will, in which case special revelation would no longer be communicable, or logic is independent of God, in which case core claims of classical theism, for example that God is the only independent being, would be violated. The best way to escape both of these horns, according to McGlothlin, is to adopt the nonstandard form of theistic logical dependence.

The Priority of Propositions. A Pragmatist Philosophy of Logic María José Frápolli, 2023-02-22. This monograph is a defence of the Fregean take on logic. The author argues that Frege's projects in logic and philosophy of language are essentially connected and that the formalist shift produced by the work of Peano, Boole and Schroeder and continued by Hilbert and Tarski is completely alien to Frege's approach in the *Begriffsschrift*. A central thesis of the book is that judgeable contents, i.e. propositions, are the primary bearers of logical properties, which makes logic embedded in our conceptual system. This approach allows coherent and correct definitions of logical constants, logical consequence and truth, and connects their use to the practices of rational agents in science and everyday life.

Optimality Theory and Pragmatics Reinhard Blutner, Anne Bezuidenhout, Richard Breheny, Sam Glucksberg, Francesca Happé, 2003-12-19. Ten leading scholars provide exacting research results and a reliable

Handbook of Logic and Language J. van Benthem, Alice G. B. ter Meulen, 1997 This Handbook documents the main trends in current research between logic and language including its broader influence in computer science linguistic theory and cognitive science The history of the combined study of Logic and Linguistics goes back a long way at least to the work of the scholastic philosophers in the Middle Ages At the beginning of this century the subject was revitalized through the pioneering efforts of Gottlob Frege Bertrand Russell and Polish philosophical logicians such as Kazimierz Ajdukiewicz Around 1970 the landmark achievements of Richard Montague established a junction between state of the art mathematical logic and generative linguistic theory Over the subsequent decades this enterprise of Montague Grammar has flourished and diversified into a number of research programs with empirical and theoretical substance This appears to be the first Handbook to bring logic language interface to the fore Both aspects of the interaction between logic and language are demonstrated in the book i e firstly how logical systems are designed and modified in response to linguistic needs and secondly how mathematical theory arises in this process and how it affects subsequent linguistic theory The Handbook presents concise impartial accounts of the topics covered Where possible an author and a commentator have cooperated to ensure the proper breadth and technical content of the papers The Handbook is self contained and individual articles are of the highest quality
