Reflections On Inequality:

Reflections on Inequality Stanislaw Andreski, 2023-03-31 Originally published in 1975 this anthology of essays focusses on the historical dimension of class inequality which has long concerned both sociologists and social philosophers but has often been neglected in literature Although Marx is the first name to come to mind when social inequality and class struggles are mentioned most of the authors included here precede him Each analyses and discusses the problems of class conflict as they understood them in the light of their own times Taken together these writers treat stratification as essentially a pecking order where position is determined by relative power a notion which subsumes rather than contradicts the economic interpretation of social inequality because wealth is a form of power The relation between the views of these authors and the well known theory of Marx is discussed in the Introduction

[Social Policy Reform in China](#) Catherine Jones Finer, 2017-11-01. This title was first published in 2003. The People's Republic of China (PRC) is a timely example of social policy reform in a socialist market economy. This important and topical edited collection brings together leading Chinese and Western experts to introduce and integrate policy issues of the PRC into the mainstream of cross-national social policy debate. Drawing upon comparative expertise in relevant aspects of social policy, the book explores the ways in which the PRC has or has not taken lessons from abroad in key social policy respects and illustrates policy-relevant relations between Chinese and Western perspectives. The contributors identify those aspects of China's recent social policy reforms that seem the most and least likely to appeal to Western societies. The collection therefore represents a substantial advance in two-way East-West lesson learning in social and public policy. [John Thomson of Duddingston](#) Robert W. Napier, 1919. [Pastoral Reflections on Global Citizenship](#) Ryan LaMothe, 2018-10-31. This book explores the growing awareness brought on by the recent explosion of communication technology that all human beings are citizens of the world. Ryan LaMothe argues that this awareness comes with an urgent need to address political issues, systems, and structures at local, state, and international levels that harm

human beings and our one habitat Through the lens of pastoral theology LaMothe analyzes the concepts of care faith power and community as they are related to addressing local and global problems linked to neoliberal capitalism racism and classism **National Reflections on the Netherlands Didactics of Mathematics** Marja Van den

Heuvel-Panhuizen, 2020-01-06 This open access book inspired by the ICME 13 Thematic Afternoon on European Didactic Traditions consists of 17 chapters in which educators from the Netherlands reflect on the teaching and learning of mathematics in their country and the role of the Dutch domain specific instruction theory of Realistic Mathematics Education Written by mathematics teachers mathematics teacher educators school advisors and developers and researchers in the field of instructional material textbooks and examinations the book offers a multitude of perspectives on important issues in Dutch mathematics education both at primary and secondary school levels Topics addressed include the theoretical underpinnings of the Dutch approach the subject of mathematics in the Dutch educational system teacher education and testing the history of mathematics education and the use of history in teaching of mathematics changes over time in subject matter domains and in the use of technology and the process of innovation and how the Dutch and in particular one Dutch institute have worked on the reform **Numbers and Geometry** John Stillwell, 2012-12-06 NUMBERS AND GEOMETRY is a beautiful and relatively elementary account of a part of mathematics where three main fields algebra analysis and geometry meet The aim of this book is to give a broad view of these subjects at the level of calculus without being a calculus or a pre calculus book Its roots are in arithmetic and geometry the two opposite poles of mathematics and the source of historic conceptual conflict The resolution of this conflict and its role in the development of mathematics is one of the main stories in the book The key is algebra which brings arithmetic and geometry together and allows them to flourish and branch out in new directions Stillwell has chosen an array of exciting and worthwhile topics and elegantly combines mathematical history with mathematics He believes that most of mathematics is about numbers curves and functions and the links between these concepts can be suggested by a thorough study of simple examples such as the circle and the square This book covers the main ideas of Euclid geometry arithmetic and the theory of real numbers but with 2000 years of extra insights attached NUMBERS AND GEOMETRY presupposes only high school algebra and therefore can be read by any well prepared student entering university Moreover this book will be popular with graduate students and researchers in mathematics because it is such an attractive and unusual treatment of fundamental topics Also it will serve admirably in courses aimed at giving students from other areas a view of some of the basic ideas in mathematics There is a set of well written exercises at the end of each section so new ideas can be instantly tested and reinforced
